1	Biorbyt	orb86048	NF-H Antibody Blocking Peptide	0.5 mg	34030	5%	As Per Rule
2	Biorbyt	orb167698	Goat polyclonal antibody to ACACB.	100 ug	38805	5%	As Per Rule
3	Biorbyt	orb167702	Goat polyclonal antibody to POLRMT.	100 ug	38805	5%	As Per Rule
4	Biorbyt	orb167703	Goat polyclonal antibody to CUTA.	100 ug	38805	5%	As Per Rule
5	Biorbyt	orb167712	Goat polyclonal antibody to TBC1D9.	100 ug	38805	5%	As Per Rule
6	Biorbyt	orb167715	Goat polyclonal antibody to MED13L.	100 ug	38805	5%	As Per Rule
7	Biorbyt	orb176707	Goat polyclonal antibody to CBX7.	100 ug	38805	5%	As Per Rule
8	Biorbyt	orb176716	Goat polyclonal antibody to FGF22.	100 ug	38805	5%	As Per Rule
9	Biorbyt	orb176733	Goat polyclonal antibody to Syndecan 1	100 ug	38805	5%	As Per Rule
10	Biorbyt	orb169579	Mouse monoclonal antibody to AKR7A3	5 ug	27969	5%	As Per Rule
11	Biorbyt	orb169579	Mouse monoclonal antibody to AKR7A3	20 ug	48906	5%	As Per Rule
12	Biorbyt	orb175838	Glutamate Receptor (Metabotropic) Type 1 antibody	100 ul	50375	5%	As Per Rule
13	Biorbyt	orb175839	Glutamate Receptor (Metabotropic) Type 2 antibody	100 ul	50375	5%	As Per Rule
14	Biorbyt	orb175840	Glutamate Receptor (Metabotropic) Type 3 antibody (KLH)	100 ul	50375	5%	As Per Rule
15	Biorbyt	orb175841	Glutamate Receptor (Metabotropic) Type 5 antibody (KLH)	100 ul	50375	5%	As Per Rule
16	Biorbyt	orb175843	Affinity purified fluorescein-labeled goat anti-chicken IgY, 500 ul, 1.0 mg/ml. Antibody type: Polyclonal.	500 ul	56987	5%	As Per Rule
17	Biorbyt	orb175847	Rabbit polyclonal antibody to ASIC-Beta.	50 ul	53314	5%	As Per Rule
18	Biorbyt	orb175848	Rabbit polyclonal antibody to CD39.	50 ul	53314	5%	As Per Rule
19	Biorbyt	orb175855	Rabbit polyclonal antibody to Neurotensin R 1.	50 ul	56620	5%	As Per Rule
20	Biorbyt	orb175857	Substance P antibody	50 ul	54232	5%	As Per Rule
21	Biorbyt	orb175858	Rabbit polyclonal antibody to PGP9.5	50 ul	54232	5%	As Per Rule
22	Biorbyt	orb175859	Rabbit polyclonal antibody to ASIC3 [DRASIC].	50 ul	56620	5%	As Per Rule
23	Biorbyt	orb175860	Rabbit polyclonal antibody to P2X2.	50 ul	49090	5%	As Per Rule
24	Biorbyt	orb175883	Mouse monoclonal antibody to CD43.	100 ul	57171	5%	As Per Rule
25	Biorbyt	orb175886	Mouse monoclonal antibody to TGF beta.	100 ul	57171	5%	As Per Rule
26	Biorbyt	orb175887	Mouse monoclonal antibody to VEGFR3 (FLT4).	100 ul	57171	5%	As Per Rule
27	Biorbyt	orb175888	Mouse monoclonal antibody to PCNA.	100 ul	58640	5%	As Per Rule
28	Biorbyt	orb175895	Mouse monoclonal antibody to Cathepsin G	100 ul	50375	5%	As Per Rule
29	Biorbyt	orb175896	Mouse monoclonal antibody to Calretinin.	100 ul	58640	5%	As Per Rule
30	Biorbyt	orb175897	Mouse monoclonal antibody to CD4	100 ul	58640	5%	As Per Rule
31	Biorbyt	orb175898	Mouse monoclonal antibody to CD34.	100 ul	58640	5%	As Per Rule
32	Biorbyt	orb176111	Rabbit polyclonal antibody to P2X1.	50 ul	46886	5%	As Per Rule
33	Biorbyt	orb176112	Rabbit polyclonal antibody to P2X2.	50 ul	49090	5%	As Per Rule
34	Biorbyt	orb176113	Rabbit polyclonal antibody to P2X3.	50 ul	49090	5%	As Per Rule
35	Biorbyt	orb176115	Endomorphin 2 antibody	50 ul	49090	5%	As Per Rule
36	Biorbyt	orb176116	huPGP9.5 (176-191) antibody	50 ul	51294	5%	As Per Rule
37	Biorbyt	orb176123	Rabbit polyclonal antibody against alpha 2a Adrenergic Receptor	50 ul	56620	5%	As Per Rule
38	Biorbyt	orb176125	Rabbit 0 antibody to Neuropeptide Y Y2 Receptor	50 ul	60844	5%	As Per Rule
39	Biorbyt	orb176127	Rabbit 0 antibody to Enkephalin	50 ul	55518	5%	As Per Rule
40	Biorbyt	orb176128	Nop30 antibody (KLH)	50 ul	56620	5%	As Per Rule
41	Biorbyt	orb176135	Rabbit 0 antibody to Neuropeptide Y Y2 Rc	50 ul	60844	5%	As Per Rule
42	Biorbyt	orb176231	Rabbit polyclonal antibody to MOR1-C.	50 ul	58640	5%	As Per Rule
43	Biorbyt	orb176232	FMRamide antibody	50 ul	49090	5%	As Per Rule
44	Biorbyt	orb176287	Rabbit polyclonal antibody to VEGFR2 (FLK1/KDR)	100 ul	54232	5%	As Per Rule
45	Biorbyt	orb175861	ppNPY antibody	50 ul	56620	5%	As Per Rule
46	Biorbyt	orb167092	Rabbit polyclonal antibody to GSTP1	50 ul	36601	5%	As Per Rule
47	Biorbyt	orb167092	Rabbit polyclonal antibody to GSTP1	100 ul	45417	5%	As Per Rule
48	Biorbyt	orb167093	Rabbit polyclonal antibody to HPRT1	50 ul	42845	5%	As Per Rule
49	Biorbyt	orb167093	Rabbit polyclonal antibody to HPRT1	100 ul	51661	5%	As Per Rule
50	Biorbyt	orb167095	Rabbit polyclonal antibody to MECP2	50 ul	36601	5%	As Per Rule
51	Biorbyt	orb167095	Rabbit polyclonal antibody to MECP2	100 ul	45417	5%	As Per Rule
52	Biorbyt	orb167097	Rabbit polyclonal antibody to SH3GL2	50 ul	36601	5%	As Per Rule
53	Biorbyt	orb167097	Rabbit polyclonal antibody to SH3GL2	100 ul	45417	5%	As Per Rule
54	Biorbyt	orb167101	Rabbit polyclonal antibody to ZEB2.	50 ul	36601	5%	As Per Rule
55	Biorbyt	orb167101	Rabbit polyclonal antibody to ZEB2.	100 ul	45417	5%	As Per Rule
56	Biorbyt	orb167102	Rabbit polyclonal antibody to FOXP3.	50 ul	36601	5%	As Per Rule
57	Biorbyt	orb167102	Rabbit polyclonal antibody to FOXP3.	100 ul	45417	5%	As Per Rule
58	Biorbyt	orb167103	Rabbit polyclonal antibody to CLCN5	50 ul	36601	5%	As Per Rule
59	Biorbyt	orb167103	Rabbit polyclonal antibody to CLCN5	100 ul	45417	5%	As Per Rule
60	Biorbyt	orb167105	Rabbit polyclonal antibody against TGF beta Receptor 2	50 ul	36601	5%	As Per Rule

968	Biorbyt	orb180464	The MMR (macrophage mannose receptor) is also called MR due to its presence on cells other than macrophages, and is designated CD206, Mrc1 (mannose receptor C type 1), or CLEC13D (C-type lectin domain family 13, member D) (1?4). CD206 mediates the endocytosis of glycoproteins by macrophages. Binds both sulfated and non-sulfated polysaccharide chains. (Microbial infection) Acts as phagocytic receptor for bacteria, fungi and other pathogens. Acts as a receptor for Dengue virus envelope protein E. Interacts with hepatitis B virus envelope protein.	100 ug	45233	5%	As Per Rule
969	Biorbyt	orb180466	Rabbit polyclonal antibody to SNAIL belongs to the snail C2H2-type zinc-finger protein family. Snail has a highest expression in kidney, regulating epithelial-to-mesenchymal transitions and cell migration. Snail family members influence cell behaviour during development and diseases such as metastatic cancer, where they act primarily as survival factors and inducers of cell movement.	100 ug	45233	5%	As Per Rule
970	Biorbyt	orb180467	Goat polyclonal antibody to ATXN3. This protein appears to be a component of the ubiquitin proteasome system and has deubiquitinase activity. It may also have roles in neuroprotection, protein homeostasis maintenance, transcriptional and cytoskeleton regulation, myogenesis and degradation of misfolded chaperone substrates. The protein contains Qn repeats in the coding region, and the expansion of these repeats from the normal 13-36 to 68-79 is one cause of Machado-Joseph disease also known as spinocerebellar ataxia-3, an autosomal dominant neurologic disorder.	100 ug	36050	5%	As Per Rule

971	Biorbyt	orb180468	Goat polyclonal antibody to Cathepsin D. Cathepsin D is a lysosomal aspartic protease of the pepsin family. Acid protease active in intracellular protein breakdown. It is composed of a dimer of disulfide-linked heavy and light chains, both produced from a single protein precursor. It is involved in the pathogenesis of several diseases such as breast cancer and possibly Alzheimer disease	100 ug	36050	5%	As Per Rule
972	Biorbyt	orb180469	Goat polyclonal to Clathrin Heavy Chain. Clathrin is formed by three clathrin heavy chains and three light chains. This protein is a major protein component of the cytoplasmic face of intracellular organelles, called coated vesicles and coated pits. These specialized organelles are involved in endocytosis of a variety of macromolecules and in the intracellular trafficking of receptors	100 ug	36050	5%	As Per Rule
973	Biorbyt	orb180470	Goat polyclonal antibody to GroEL. GroEL protein is a 60 kDa chaperone that promotes refolding of misfolded polypeptides especially under stressful conditions.	100 ug	36050	5%	As Per Rule
974	Biorbyt	orb180472	Goat polyclonal antibody to mouse Rab11b. Rab11 belongs to the small GTPase superfamily, Rab family. The protein is membrane-bound and plays essential roles in vesicle and granule targeting. Similar to Rab11a, it has been shown that Rab11b associates with recycling endosomes.	100 ug	36050	5%	As Per Rule
975	Biorbyt	orb180471	Goat polyclonal antibody to mouse Rab7. Rab7 belongs to the small GTPase superfamily, Rab family. It has been localized to late endosomes, regulates vesicle traffic in the late endosomes and also from late endosomes to lysosomes. Rab7 also contributes to the maturation of phagosomes (acidification).	100 ug	36050	5%	As Per Rule
976	Biorbyt	orb180479	Rabbit polyclonal antibody to SNAIL belongs to the snail C2H2-type zinc-finger protein family. Snail has a highest expression in kidney, regulating epithelial-to-mesenchymal transitions and cell migration. Snail family members influence cell behaviour during development and diseases such as metastatic cancer, where they act primarily as survival factors and inducers of cell movement.	100 ug	45233	5%	As Per Rule

984	Biorbyt	orb181785	Rabbit polyclonal antibody to beta actin, which is also known as PS1TP5BP1 and BRWS1. Actin is frequently found in the cytoplasmic mRNP granules containing untranslated mRNAs and is expressed in the whole blood and adrenal gland. It is overexpressed in the neutrophil and T lymphocytes. Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed in all eukaryotic cells and are major constituent of microfilaments.	100 ug	45233	5%	As Per Rule

1058	Biorbyt	orb182468	Mouse monoclonal to NF68. Neurofilaments are composed of 3 neuron-specific proteins with apparent molecular masses of 68 kD (NFL), 125 kD (NFM) and 200 kD (NFH) on SDS-gel electrophoresis. And they have a role in the maturation of regenerating myelinated axons. Neurofilament 68 (NF68), also called Neurofilament Protein, Light Chain (NFL). It is one of the most abundant cytoskeletal components of the neuron. Mutations in this gene were reported as a cause for autosomal dominant Charcot-Marie-Tooth type 2E (CMT2E) linked to chromosome 8p21. NFL was identified repeatedly in both screenings and found to interact with Myotubularin-related 2 gene, MTMR2 in both Schwann cells and neurons.	100 ug	47437	5%	As Per Rule

1112	Biorbyt	orb182526	Rabbit polyclonal antibody to CEMP1, which is also known as CP-23 and cementum protein. CEMP1 is frequently found in the cytoplasmic matrix and is expressed in the kidney and lymph nodes. It is overexpressed in the serum and pancreatic juice. CEMP1 extensively functions in the modulation of a number of cellular genes like those involved in development, growth, cell death, cell cycle and molecules associated with cancer.	100 ug	47437	5%	As Per Rule

1468	Biorbyt	orb182923	Rabbit polyclonal antibody to CD55, which is also known as CR and DAF. CD55 is frequently found in the plasma membrane and is expressed in the mandibular arch muscles and hindlimb ventral muscle. It is overexpressed in the whole blood and cerebrospinal fluid. This protein recognizes C4b and C3b fragments that condense with cell-surface hydroxyl or amino groups when nascent C4b and C3b are locally generated during C4 and C3 activation. It can extensively act as a receptor for coxsackievirus A21, coxsackieviruses B1, B3 and B5.	100 ug	47437	5%	As Per Rule

1991	Biorbyt	orb183495	Rabbit polyclonal antibody to NeuN, which is also known as FOX3 and RBFOX3. NeuN is frequently found in the significant cytoplasmic localization in neurons from brains from HIV-infected individuals with cognitive impairment and is expressed in the neurons and mesenchymal stem cells. It is overexpressed in the cerebellum and frontal cortex. This protein extensively regulates alternative splicing of RBFOX2 to enhance the production of mRNA species that are targeted for nonsense-mediated decay (NMD).	100 ug	47437	5%	As Per Rule

			Rabbit polyclonal antibody to FCRL4, which is also known as IRTA1 and FCRH4. FCRL4 is frequently found in the significant cytoplasmic localization in single pass membrane and is expressed in the testis and thymus. It is overexpressed in the spleen and terminal ileum. This protein can extensively function as an inhibitor of the B-cell receptor signaling and also functions in the B-cell-mediated immune response.		45233	5%	As Per Rule

2439	Biorbyt	orb184007	Rabbit polyclonal antibody to HLA class 1 ABC, which is also known as Aw-19. It is frequently found in the extracellular matrix and is expressed in the podocytes and stem cells. It is overexpressed in the oral epithelium and Islet of Langerhans. This protein is having alpha chain with Mol Wt of 44kDa and class Ia is ubiquitously expressed, except central nervous system, placenta, sperm cells and is extensively involved in presentation of foreign antigens to the immune system.	100 ug	47437	5%	As Per Rule

2622	Biorbyt	orb184228	Rabbit polyclonal antibody to HLA class 1 ABC, which is also known as Aw-19. It is frequently found in the extracellular matrix and is expressed in the podocytes and stem cells. It is overexpressed in the oral epithelium and Islet of Langerhans. This protein is having alpha chain with Mol Wt of 44kDa and class Ia is ubiquitously expressed, except central nervous system, placenta, sperm cells and is extensively involved in presentation of foreign antigens to the immune system.	100 ug	47437	5%	As Per Rule

2688	Biorbyt	orb184308	Rabbit polyclonal antibody to integrin beta 8, which is also known as ITGB8 and integrin subunit beta 8. It is frequently found in the plasma membrane and is expressed in the oligodendrocyte progenitor cells and spinal cord. It is overexpressed in the minor salivary gland and frontal cortex. This protein is a receptor for fibronectin and also acts as a cell surface adhesion receptor mediating cell-adhesion to extra cellular matrix or to other cells through hetero dimerization and connecting to the cytoskeleton and various signaling molecules within cells.	100 ug	47437	5%	As Per Rule

			Rabbit polyclonal antibody to IRG1, which is also known as CAD. It is frequently found in the mitochondrion and is expressed in the microglia and macrophage cells. It is overexpressed in the LPS-tolerized macrophages. This protein can extensively act as a negative regulator of the toll-like receptors (TLRs)-mediated inflammatory innate response by stimulating the tumor necrosis factor alpha-induced protein TNFAIP3 expression via reactive oxygen species (ROS) in LPS-tolerized macrophages and is involved in the inhibition of the inflammatory response.		47437	5%	As Per Rule

			Rabbit polyclonal antibody to IL36, which is also known as IL-1RP2 AND IL1f9. It is frequently found in the extracellular matrix and is expressed in the minor salivary gland and esophagus-mucosa. It is overexpressed in the oral epithelium and saliva. This protein can play an extensive role in proinflammatory responses during particular neutrophilic airway inflammation and activates mitogen-activated protein kinases and NF-kappa B in primary lung fibroblasts, and stimulates the expression of IL-8 and CXCL3 and Th17 chemokine CCL20 in lung fibroblasts. May be involved in the innate immune response to fungal pathogens, such as Aspergillus fumigatus.	100 ug	47437	5%	As Per Rule

2895	Biorbyt	orb184540	Rabbit polyclonal antibody to KMT2C, which is also known as MLL3 and HALR. It is frequently found in the nucleus and is expressed in the limb bud mesenchyme cells and heart. It is overexpressed in the plasma. KMT2C/MLL3 may be a catalytic subunit of this complex and is involved in leukemogenesis and developmental disorder. The central component of this protein is a coactivator complex of nuclear receptors, involved in transcriptional coactivation.	100 ug	47437	5%	As Per Rule

			Rabbit polyclonal antibody to KRT83, which is also known as HHb3 and KR83. It is frequently found in the extracellular matrix and is expressed in the blood granulocytes and duodenum. It is overexpressed in the hair follicle and skin. As a type II hair keratin it is a basic protein which heterodimerizes with type I keratins to form hair and nails. The type II hair keratins are clustered in a region of chromosome 12q13 and are grouped into two distinct subfamilies based on structure similarity. One subfamily consisting of KRTHB1, KRTHB3, and KRTHB6, is highly related.	100 ug	47437	5%	As Per Rule

			Rabbit polyclonal antibody to KIAA2018, which is also known as upstream transcription factor 3 and helix-loop-helix domain containing protein USF3. It is frequently found in the nucleus and is expressed in the arteries and lungs. It is overexpressed in the spleen and vermiform appendix. This protein has an important and effective part in the DNA binding whereas it is also involved in mannosyl-oligosaccharide 1,2-alpha-mannosidase activity and protein dimerization activity.	100 ug	47437	5%	As Per Rule

3218	Biorbyt	orb184894	Rabbit polyclonal antibody to LEMD1, which is also known as CT50 and LEMP-1. It is frequently found in the plasma membrane and is expressed in the testis. It is overexpressed in the spleen and colon. The LEMD1 protein appears to fall in the category of CTAs, it may represent a promising target antigen for immunotherapy of CRCs.	100 ug	47437	5%	As Per Rule

3594	Biorbyt	orb185319	Rabbit polyclonal antibody to MSH5, which is also known as G7 and NG23. It is frequently found in the mitochondrion and is expressed in the primary oocyte and hematopoietic bone marrow. It is overexpressed in the stomach and gall bladder. This protein is extensively involved in the meiotic recombination and facilitates crossovers between homologs during meiosis. MSH5 is putatively required for chromosome pairing in meiosis and DNA replicative mismatch repair.	100 ug	47437	5%	As Per Rule

3836	Biorbyt	orb185581	Rabbit polyclonal antibody to MEST, which is also known as EC 3 and PEG1. It is frequently found in the plasma membrane and is expressed in the ovarian mesenchymal stroma cells and duct progenitor cells. It is overexpressed in the omentum and adrenal gland. Mesoderm-specific transcript protein expressed in fetal tissues from the paternal chromosome and in hydatidiform mole of androgenic origin is identical to the murine imprinted gene Peg1 and unlikely to be a contributor to Silver-Russell syndrome with aberrant imprinting in invasive breast carcinomas.	100 ug

3912	Biorbyt	orb185667	Rabbit polyclonal antibody to Occludin, which is also know as OCLN. It is frequently found in the plasma membrane and bicellular tight junctions. It is expressed in the tight junctions of the epithelial and endothelial cells and is overexpressed in the kidney. This protein plays an extensive role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier and can also induce adhesion when expressed in cells lacking tight junctions. Along with this occludin helps in regulation of bicellular tight junction assembly and protein complex assembly.	100 ug	47437	5%	As Per Rule

4077	Biorbyt	orb185932	Rabbit polyclonal antibody to ROR gamma 1 whose expression can be detected in the heart but is highly expressive in the brain and atria. It is found in the nuclear body. It is a negative regulator of adipocyte differentiation through the regulation of early phase gene expression, such as MMP3 and controls adipogenesis as well as adipocyte size and modulates insulin sensitivity in obesity. This protein is considered to have intrinsic transcriptional activity along with some natural ligands like oxysterols that act as agonists (25-hydroxycholesterol) or inverse agonists (7-oxygenated sterols), enhancing or repressing the transcriptional activity respectively.	100 ug	47437	5%	As Per Rule

4359	Biorbyt	orb186274	Rabbit polyclonal antibody to TYRO3 also known as tyrosine protein kinase receptor and TIF whose expression can be detected in various tissues but is highly expressive in the brain. It is found in the plasma membrane. It Activates the AKT survival pathway including nuclear translocation of NF-kappa-B and up-regulation of transcription of NF-kappa-B-regulated genes. TYRO3 signaling plays a role in various processes such as neuron protection from excitotoxic injury, platelet aggregation and cytoskeleton reorganization. It also plays an important role in inhibition of Toll-like receptors (TLRs) mediated innate immune response by activating STAT1, which selectively induces production of suppressors of cytokine signaling SOCS1 and SOCS3.	100 ug	60476	5%	As Per Rule

6051	Biorbyt	orb312158	Rabbit polyclonal antibody to NOTCH1 also known as hN1, which is expressed in the lymphoid tissues but is highly expressed in brain stem and lungs. It is found in the nucleus and MAML1-RBP-Jkappa-ICN1 complex. This protein functions as a receptor for membrane-bound ligands Jagged1, Jagged2 and Delta1 to regulate cell-fate determination. Upon ligand activation through the released notch intracellular domain (NICD) it forms a transcriptional activator complex with RBPJ/RBPSUH and activates genes of the enhancer of split locus. It also affects the implementation of differentiation, proliferation and apoptotic programs involved in angiogenesis and negatively regulates endothelial cell proliferation and migration and angiogenic sprouting. Involved in the maturation of both CD4+ and CD8+ cells in the thymus.	100 ug	47437	5%	As Per Rule

6069	Biorbyt	orb312179	Rabbit polyclonal antibody to type X collagen, which is expressed in the endometrium and cerebral cortex but is highly expressed in bone marrow. It is found in the proteinaceous extracellular matrix. Type X collagen is a product of hypertrophic chondrocytes and has been localized to presumptive mineralization zones of hyaline cartilage. This protein is extensively involved in the metal ion binding process. It also plays a major role in cartilage development and endochondral ossification.	100 ug	47437	5%	As Per Rule
6070	Biorbyt	orb312180	Rabbit polyclonal antibody to CHRFA7A	100 ug	47437	5%	As Per Rule
6071	Biorbyt	orb312181	Rabbit polyclonal to CD8, was first discovered as a cell surface marker in mice and was used to distinguish between CD8+ CTLs and CD4+ Th cells. CD8 exists as both a heterodimer (CD8??) and a homodimer (CD8??) of which the former is expressed on the majority of CTLs. CD8 has been shown to be involved in CTL co-activation by increasing antigen sensitivity, and by stabilizing the TCR/pMHC interaction. In order to carry out these roles, the CD8 co-receptor binds to a distinct invariant region of the pMHCI molecule, compared to the TCR, allowing the potential for tripartite (TCR/pMHC/CD8) complex formation. CD8 is most often described as a T-cell co-receptor because it plays an important role in T-cell signaling, via p56lck, to induce TCR mediated T-cell activation signals. Work in our lab and others has shown that the CD8 co-receptor is also important for CD8+ T-cell development, stabilization of the interface between CD8+ T-cells and target cells, and activation of intestinal epithelial T lymphocytes (iIELs).	100 ug	47437	5%	As Per Rule

6255	Biorbyt	orb312399	Rabbit polyclonal antibody to NFkB p65 also known as TF65 and RELA whose expression can be detected in the brain and choroid plexus but is highly expressive in the telencephalon and tonsils. It is found in the nucleus after LPS stimulation. NFkB-p65 is a subunit of NF-kappa-B transcription complex, which plays a crucial role in inflammatory and immune responses. The inhibitory effect of I-kappa-B upon NF-kappa-B in the cytoplasm is exerted primarily through the interaction with p65. P65 shows a weak DNA-binding site which could contribute directly to DNA binding in the NF-kappa-B complex.	100 ug	47437	5%	As Per Rule

6414	Biorbyt	orb312580	Rabbit polyclonal antibody to PCDH19 also known as KIAA1313 whose expression can be detected in the brain and cerebellum but it is highly expressive in the ovary and skin fibroblast. It is found in the integral component of plasma membrane. This protein is a potential calcium-dependent cell-adhesion protein. It is extensively involved in homophilic cell adhesion via plasma membrane adhesion molecules and in brain as well as nervous system development.	100 ug	47437	5%	As Per Rule

			Rabbit polyclonal antibody to PCV2 cap protein also known as ORF2 whose expression can be detected in the nucleus. It is found in the host nucleus and virion. This protein can self-assemble to form the virion icosahedral capsid with a T=1 symmetry. This very small cap (17 - 22 nm in diameter) allows the virus to be very stable in the environment and resistant to some disinfectants including detergents. It can also regulate DNA binding along with its involvement in the receptor-mediated endocytosis of a virus by the host cell.		51294	5%	As Per Rule

			Rabbit polyclonal antibody to SLC22A3 and is also known as EMT and Organic cation transporter 3 whose expression can be detected in the umbilical cord and fetal lung but it is highly expressive in the adrenal gland and cortex. It is found in the membrane. This protein mediates potential-dependent transport of a variety of organic cations and is significantly involved in the disposition of cationic neurotoxins and neurotransmitters in the brain. It also helps in maintaining dopamine transport and histamine uptake.		47437	5%	As Per Rule

			Rabbit polyclonal antibody to PLETT also known as mAgK114 whose expression can be detected in hair follicle cells and the sebaceous gland of skin but it is highly expressed in the placenta. It is found at the apical membrane of the most differentiated keratinocytes of the outer root sheath (ORS). This protein can modulate leading keratinocyte migration and cellular adhesion to matrix proteins during a wound-healing response and promotes wound repair and plays a role during trichilemmal differentiation of the hair follicle. It is extensively involved in wound healing, spreading of epidermal cells and negative regulation of cell-matrix adhesion.		47437	5%	As Per Rule

			Rabbit polyclonal antibody to PLVAP also known as PV-1 whose expression can be detected in the aorta and trachea but is highly expressed in tumor associated endothelium. It is found in fenestral and stomatal diaphragms in fenestrated endothelia and trans endothelial channels. This protein is extensively involved in the formation of stomatal and fenestral diaphragms of caveolae.		47437	5%	As Per Rule

			Rabbit polyclonal antibody to SLC22A3 and is also known as protein E7 whose expression can be detected in the early protein. It is found in the host cytoplasm and host nucleus. This protein plays an effective role in viral genome replication by driving entry of quiescent cells into the cell cycle which stimulates progression from G1 to S phase, allowing the virus to efficiently use the cellular DNA replicating machinery to achieve viral genome replication. It also plays an extensive role in the inhibition of both antiviral and antiproliferative functions of host interferon alpha.		47437	5%	As Per Rule

			Rabbit polyclonal antibody to ZNF336 also known as zinc finger protein and GDNF-inducible zinc finger protein1 whose expression can be detected in the skeletal muscle and liver but it is highly expressed in the fetal brain. It is found in the nucleoplasm. This protein acts as a transcriptional repressor and binds the GZF1 responsive element (GRE) (consensus: 5'-TGCGCN[TG][CA]TATA-3'). May be regulating VSX2/HOX10 expression. It is extensively involved in metal ion binding and RNA polymerase II core promoter proximal region sequence-specific DNA binding.	100 ug	47437	5%	As Per Rule

7271	Biorbyt	orb313869	Rabbit polyclonal antibody to Interferon gamma	100 ug	45233	5%	As Per Rule
			Rabbit polyclonal antibody to collagen IV also known as collagen alpha1 chain whose expression can be detected in the endocervix and dura mater but it is highly expressive in the placenta and arm muscle. It is found in the basement membrane. Type IV collagen is the major structural component of glomerular basement membranes (GBM), forming a 'chicken-wire' meshwork together with laminins, proteoglycans and entactin/nidogen. This protein is extensively involved in the extracellular matrix constituent conferring elasticity and its structural constituent.	100 ug	45233	5%	As Per Rule

			Rabbit polyclonal antibody to HEPICIDIN is also known as LEAP1 whose expression can be detected in the tonsils and lungs but it is highly expressive in the liver. It is found in the apical cortex. This protein extensively acts by promoting endocytosis and degradation of ferroportin leading to the retention of iron in iron-exporting cells and decreased flow of iron into plasma. It controls the major flows of iron into plasma: absorption of dietary iron in the intestine and recycling of iron by macrophages, which phagocytose old erythrocytes, other cells and mobilization of stored iron from hepatocytes.	100 ug	45233	5%	As Per Rule

			Rabbit polyclonal antibody to RANKL which is immunized with a KLH conjugated synthetic peptide derived from human RANK which is polyclonal and unconjugated in nature. IT is a transmembrane protein. RANK is found in the pancreas, liver, thymus and colon. It helps in the activation of NF-kB pathway. It also carries out osteoclastogenesis, thermoregulation and also helps in the development of the memory gland. It is also expressed in some cases of cancers as well. RANK has power to interact with TRAFs.	100 ug	45233	5%	As Per Rule

7285	Biorbyt	orb315555	Rabbit polyclonal antibody against TGF beta Receptor 2	100 ug	45233	5%	As Per Rule
			Rabbit polyclonal antibody to MCP3/CCL7 also known as NC28 whose expression can be detected in the vermiform appendix and lungs but it is highly expressive in bone marrow. It is found in the extracellular matrix. It has a chemotactic factor that attracts monocytes and eosinophils but not neutrophils that can augments monocyte anti-tumor activity and also induces the release of gelatinase B. This protein can bind heparin along with CCR1, CCR2 and CCR3.	100 ug	45233	5%	As Per Rule
7286	Biorbyt	orb315556		100 ug			
7287	Biorbyt	orb315557	Rabbit polyclonal antibody to VEGFR3	100 ug	45233	5%	As Per Rule

7288	Biorbyt	orb315558	Rabbit polyclonal antibody to NRSF/REST whose expression can be detected in the peripheral blood lymphocytes and ovary but it is highly expressive in the thymus. It is found in the nucleoplasm. This protein restricts the expression of neuronal genes by associating with two distinct corepressors, mSin3 and CoREST, which in turn recruit histone deacetylase to the promoters of REST-regulated genes. It acts as a Transcriptional repressor which binds neuron-restrictive silencer element (NRSE) and represses neuronal gene transcription in non-neuronal cells. Mediates repression by recruiting the BHC complex at RE1/NRSE sites which acts by deacetylating and demethylating specific sites on histones, thereby acting as a chromatin modifier.	100 ug	45233	5%	As Per Rule

7359	Biorbyt	orb315590	Rabbit polyclonal antibody to LYN (Phospho-Y397) also known as p53Lyn and p56Lyn whose expression can be detected in the placenta and fetal brain but is highly expressive in the neuroblastoma tumors and neuronal cells. It is found in the perinuclear region. This protein is a Non-receptor tyrosine-protein kinase that transmits signals from cell surface receptors and plays an important role in the regulation of innate and adaptive immune responses, hematopoiesis, responses to growth factors and cytokines, integrin signaling, but also responses to DNA damage and genotoxic agents.	30 ul (Trial size)	22827	5%	As Per Rule

7642	Biorbyt	orb315685	Rabbit polyclonal antibody to DNA Polymerase zeta also known as hREV3 and REV3-like whose expression can be detected in the whole body ubiquitously. It is found in the nucleus. It can perform various functions like DNA-dependent DNA replication. This protein lacks an intrinsic 3'-5' exonuclease activity and thus has no proofreading function but has a catalytic subunit of the DNA polymerase zeta complex, an error-prone polymerase specialized in translation DNA synthesis (TLS).	30 ul (Trial size)	20440	5%	As Per Rule

7999	Biorbyt	orb315804	Rabbit polyclonal antibody to mTORC1 and is also known as LST8 and MLST8. Diseases associated with MLST8 include Benign Familial Neonatal Epilepsy and Childhood Absence Epilepsy. Among its related pathways are Constitutive Signaling by AKT1 E17K in Cancer and RET signaling. Q9BVC4 Subunit of both mTORC1 and mTORC2, which regulates cell growth and survival in response to nutrient and hormonal signals. mTORC1 is activated in response to growth factors or amino acids. Growth factor-stimulated mTORC1 activation involves a AKT1-mediated phosphorylation of TSC1-TSC2, which leads to the activation of the RHEB GTPase that potently activates the protein kinase activity of mTORC1. Amino acid-signaling to mTORC1 requires its relocalization to the lysosomes mediated by the Ragulator complex and the Rag GTPases. Activated mTORC1 up-regulates protein synthesis by phosphorylating key regulators of mRNA translation and ribosome synthesis. mTORC1 phosphorylates EIF4EBP1 and releases it from inhibiting the elongation initiation factor 4E (eIF4E). mTORC1 phosphorylates and activates S6K1 at Thr-389, which then promotes protein synthesis by phosphorylating PDCD4 and targeting it for degradation. Within mTORC1, LST8 interacts directly with MTOR and enhances its kinase activity. In nutrient-poor conditions, it stabilizes the MTOR-RPTOR interaction and favors RPTOR-mediated inhibition of MTOR activity. mTORC2 is also activated by growth factors, but seems to be nutrient-insensitive. mTORC2 seems to function upstream of Rho GTPases to regulate the actin cytoskeleton, probably by activating one or more Rho-type guanine nucleotide exchange factors. mTORC2 promotes the serum-induced	30 ul (Trial size)	22827	5%	As Per Rule

8158	Biorbyt	orb316989	This antibody recognizes a protein of 44kDa, which is identified as AMACR, also known as p504S. It is an enzyme that is involved in bile acid biosynthesis and beta-oxidation of branched-chain fatty acids. AMACR is essential in lipid metabolism. It is expressed in cells of premalignant high-grade prostatic intraepithelial neoplasia (HGPIN) and prostate adenocarcinoma. The majority of the carcinoma cells show a distinct granular cytoplasmic staining reaction. AMACR is present at low or undetectable levels in glandular epithelial cells of normal prostate and benign prostatic hyperplasia. A spotty granular cytoplasmic staining is seen in a few cells of the benign glands. AMACR is expressed in normal liver (hepatocytes), kidney (tubular epithelial cells) and gall bladder (epithelial cells). Expression has also been found in lung (bronchial epithelial cells) and colon (colonic surface epithelium). AMACR expression can also be found in hepatocellular carcinoma and kidney carcinoma. Past studies have also shown that AMACR is expressed in various colon carcinomas (well, moderately and poorly differentiated) and over expressed in prostate carcinoma.	0.1 ml	57905	5%	As Per Rule
8159	Biorbyt	orb317027	recognizes an epitope on the extracellular domain of gonadotropin releasing hormone (GnRH) receptor or luteinizing hormone receptor (LHCGR). Lutropin (also designated luteinizing hormone) plays a role in spermatogenesis and ovulation by stimulating the testes and ovaries to produce steroids. Gonadotropin (also designated choriogonadotropin) production in the placenta maintains estrogen and progesterone levels during the first trimester of pregnancy. Ovaries and testes abundantly express luteinizing hormone/choriogonadotropin receptor. GnRH receptor contains seven hydrophobic transmembrane domains connected by hydrophilic extracellular and intracellular loops characteristic of G-protein coupled receptors. GnRH stimulates the gonadotrophs of the anterior pituitary to secrete luteinizing hormone (LH) as well as follicle-stimulating hormone (FSH). GnRH influences the protective effect of pregnancy and Gonadotropin against breast cancer. The expression of GnRH on breast carcinoma correlates in part to the degree of tumor differentiation. GnRH-positive breast tumors occur more frequently in tumors with greater cell differentiation in premenopausal women. GnRH is present in luteal and granulosa cells as well as in ovarian cell membrane preparations.	20 ug	57905	5%	As Per Rule
8160	Biorbyt	orb317047	Granzyme B is a member of the granule serine protease family stored specifically in NK cells or cytotoxic T cells. Cytolytic T lymphocytes (CTL) and natural killer (NK) cells share the ability to recognize, bind, and lyse specific target cells. They are thought to protect their host by lysing cells bearing on their surface 'non-self' antigens, usually peptides or proteins resulting from infection by intracellular pathogens. Granzyme B is crucial for the rapid induction of target cell apoptosis by CTLs in the cell-mediated immune response. Granzyme B is useful as a marker in the identification of NK/T-cell lymphomas. High percentages of cytotoxic T-cells have been shown to be an unfavorable prognostic indicator in Hodgkin's Disease.	20 ug	57905	5%	As Per Rule

8161	Biorbyt	orb317050	Eukaryotic histones are basic and water-soluble nuclear proteins that form hetero-octameric nucleosome particles by wrapping 146 base pairs of DNA in a left-handed super-helical turn sequentially to form chromosomal fiber. Two molecules of each of the four core histones (H2A, H2B, H3, and H4) form the octamer; formed of two H2A-H2B dimers and two H3-H4 dimers, forming two nearly symmetrical halves by tertiary structure. Over 80% of nucleosomes contain the linker Histone H1, derived from an intronless gene that interacts with linker DNA between nucleosomes and mediates compaction into higher order chromatin. Histones are subject to posttranslational modification by enzymes primarily on their N-terminal tails, but also in their globular domains. Such modifications include methylation, citrullination, acetylation, phosphorylation, sumoylation, ubiquitination and ADP-ribosylation.	20 ug	57905	5%	As Per Rule
8162	Biorbyt	orb317068	This mAb reacts with the HLA-DR antigen, a member of MHC class II molecules. It does not cross react with HLA-DP and HLA-DQ. HLA-DR is a heterodimeric cell surface glycoprotein comprised of a 36kDa alpha (heavy) chain and a 28kDa beta (light) chain. It is expressed on B-cells, activated T-cells, monocytes/macrophages, dendritic cells and other non-professional APCs. In conjunction with the CD3/TCR complex and CD4 molecules, HLA-DR is critical for efficient peptide presentation to CD4+ T cells. It is an excellent histiocytic marker in paraffin sections producing intense cytoplasmic staining. True histiocytic neoplasms are similarly positive. HLA-DR antigens also occur on a variety of epithelial cells and their corresponding neoplastic counterparts.	20 ug	57905	5%	As Per Rule
8163	Biorbyt	orb317069	HLA-DRB1 binds peptides derived from antigens that access the endocytic route of antigen presenting cells (APC) and presents them on the cell surface for recognition by the CD4 T-cells. [UniProt]	20 ug	57905	5%	As Per Rule
8164	Biorbyt	orb317075	This mAb reacts with the beta-chain of HLA-DRB1 antigen, a member of MHC class II molecules. It does not cross react with HLA-DP and HLA-DQ. HLA-DR is a heterodimeric cell surface glycoprotein comprised of a 36kDa alpha (heavy) chain and a 28kDa beta (light) chain. It is expressed on B-cells, activated T-cells, monocytes/macrophages, dendritic cells and other non-professional APCs. In conjunction with the CD3/TCR complex and CD4 molecules, HLA-DR is critical for efficient peptide presentation to CD4+ T cells. It is an excellent histiocytic marker in paraffin sections producing intense cytoplasmic staining. True histiocytic neoplasms are similarly positive. HLA-DR antigens also occur on a variety of epithelial cells and their corresponding neoplastic counterparts. Loss of HLA-DR expression is related to tumor microenvironment and predicts adverse outcome in diffuse large B-cell lymphoma.	20 ug	57905	5%	As Per Rule
8165	Biorbyt	orb317107	Recognizes a single protein of 33-34kDa, identified as the prostate specific antigen (PSA). This mAb is highly specific to PSA and stains prostatic secretory and ductal epithelium in both normal and neoplastic tissues. PSA is a chymotrypsin-like serine protease (kallikrein family) exclusively produced by the prostate epithelium, and abundant in seminal fluid. PSA can be detected in the sera of patients with prostatic carcinoma. It is predominantly complexed to a liver-derived serine protease inhibitor, alpha-1-antichymotrypsin (ACT). A higher proportion of serum PSA is complexed to ACT in prostate cancer than in benign prostate hyperplasia. This mAb makes an excellent pair with mAb A67-B/E3 for PSA tests.	20 ug	57905	5%	As Per Rule

SI. No.	Principal Name	Cat. No.	Products Description	Pack Size	Rc Price	Discount (%)	GST
8166	Biorbyt	orb317173	It is a cocktail of four highly specific monoclonal antibodies (EGP40/826, EGP40/837, EGP40/1110, EGP40/1120) that recognize extracellular as well as intracellular domains of the epithelial cellular adhesion molecule (Ep-CAM). It is a 40-43kDa transmembrane epithelial glycoprotein, identified as epithelial specific antigen (ESA), or Ep-CAM. Ep-CAM is expressed on baso-lateral cell surface in most simple epithelia and a vast majority of carcinomas. This epithelial antigen plays an important role as a tumor-cell marker in lymph nodes from patients with esophageal carcinoma otherwise classified as node-negative. Epithelial antigen has also been suggested as a discriminator between basal cell and baso-squamous carcinomas, and squamous cell carcinoma of the skin.	20 ug	57905	5%	As Per Rule
8167	Biorbyt	orb317190	Recognizes a sialoglycoprotein of 27-32kDa, identified as CD99, or MIC2 gene product, or E2 antigen. MIC2 gene is located in the pseudo-autosomal region of the human X and Y chromosome. MIC2 gene encodes two distinct proteins, which are produced by alternative splicing of the CD99 gene transcript and are identified as bands of 30 and 32kDa (p30/32). Although its function is not fully understood, CD99 is implicated in various cellular processes including homotypic aggregation of T cells, upregulation of T cell receptor and MHS molecules, apoptosis of immature thymocytes and leukocyte diapedesis. CD99 is expressed on the cell membrane of some lymphocytes, cortical thymocytes, and granulosa cells of the ovary. Most pancreatic islet cells, Sertoli cells of the testis, and some endothelial cells express this antigen. Mature granulocytes express very little or no CD99. MIC2 is strongly expressed on Ewing's sarcoma cells and primitive peripheral neuroectodermal tumors.	100 ul	57905	5%	As Per Rule
8168	Biorbyt	orb317255	CD31 (PECAM-1) is a transmembrane glycoprotein member of the immunoglobulin supergene family of adhesion molecules. CD31 is expressed by stem cells of the hematopoietic system and is primarily used to identify and concentrate these cells for experimental studies as well as for bone marrow transplantation. Anti-CD31 has shown to be highly specific and sensitive for vascular endothelial cells. Staining of nonvascular tumors (excluding hematopoietic neoplasms) is rare. CD31 mAb reacts with normal, benign, and malignant endothelial cells which make up blood vessel lining. The level of CD31 expression can help to determine the degree of tumor angiogenesis, and a high level of CD31 expression may imply a rapidly growing tumor and potentially a predictor of tumor recurrence.	100 ul	57905	5%	As Per Rule
8169	Biorbyt	orb317313	Recognizes a neuraminidase-sensitive sialoprotein (CDw75), present on cell membrane and cytoplasm of germinal center B-cells and derived lymphomas. This mAb reacts with RBC precursors of bone marrow, ductal and ciliated epithelial cells of kidney, breast, prostate, pancreas, lung, and with glioblastomas, astrocytomas, and Reed Sternberg cells in lymphocyte predominant Hodgkin s disease. It is shown to be a helpful antibody for ascribing a B-cell phenotype in known lymphoid tissues.	20 ug	57905	5%	As Per Rule

8170	Biorbyt	orb317424	Recognizes a single chain glycoprotein of 105/120kDa, identified as CD30/Ki-1. Its epitope is located between aa112-412. CD30 is synthesized as a 90kDa precursor, which is processed in the Golgi complex into a membrane-bound phosphorylated mature 105/120kDa glycoprotein. In Hodgkin's disease, CD30/Ki-1 antigen is expressed by mononuclear-Hodgkin and multinucleated Reed-Sternberg cells. It is also expressed by the tumor cells of a majority of anaplastic large cell lymphomas as well as by a varying proportion of activated T and B cells. This mAb distinguishes large cell lymphomas derived from activated lymphoid cells from histiocytic malignancies and lymphomas derived from resting and precursor lymphoid cells or from anaplastic carcinomas. About one third of the Ki-1 positive lymphomas lack the leukocyte common antigen (CD45).	100 ul	57905	5%	As Per Rule
8171	Biorbyt	orb317425	Recognizes a single chain glycoprotein of 105/120kDa, identified as CD30/Ki-1. CD30 is synthesized as a 90kDa precursor, which is processed in the Golgi complex into a membrane-bound phosphorylated mature 105/120kDa glycoprotein. In Hodgkin's disease, CD30/Ki-1 antigen is expressed by mononuclear-Hodgkin and multinucleated Reed-Sternberg cells. It is also expressed by the tumor cells of a majority of anaplastic large cell lymphomas as well as by a varying proportion of activated T and B cells. This mAb distinguishes large cell lymphomas derived from activated lymphoid cells from histiocytic malignancies and lymphomas derived from resting and precursor lymphoid cells or from anaplastic carcinomas. About one third of the Ki-1 positive lymphomas lack the leukocyte common antigen (CD45).	100 ul	57905	5%	As Per Rule
8172	Biorbyt	orb317428	Recognizes a single chain glycoprotein of 105/120kDa, identified as CD30/Ki-1. CD30 is synthesized as a 90kDa precursor, which is processed in the Golgi complex into a membrane-bound phosphorylated mature 105/120kDa glycoprotein. In Hodgkin's disease, CD30/Ki-1 antigen is expressed by mononuclear-Hodgkin and multinucleated Reed-Sternberg cells. It is also expressed by the tumor cells of a majority of anaplastic large cell lymphomas as well as by a varying proportion of activated T and B cells. About one third of the Ki-1 positive lymphomas lack the leukocyte common antigen (CD45).	100 ul	57905	5%	As Per Rule
8173	Biorbyt	orb317514	Cytokeratin 8 (CK8) belongs to the type II (or B or basic) subfamily of high molecular weight cytokeratins and exists in combination with cytokeratin 18 (CK18). This mAb cocktail recognizes all simple epithelia including glandular epithelium, for example thyroid, female breast, gastrointestinal tract, respiratory tract, and urogenital tract including transitional epithelium. All adenocarcinomas and most squamous carcinomas are positive but keratinizing squamous carcinomas are usually negative. This antibody is useful in demonstrating the presence of Paget cells; there is very little keratin 18 in the normal epidermis so only Paget cells are stained. Immunohistochemical staining with this mAb is indistinguishable from that obtained with monoclonal antibody 5D3.	20 ug	57905	5%	As Per Rule

8260	Biorbyt	orb317655	Rabbit polyclonal antibody to MCU also known as HsMCU whose expression can be detected in the cerebellum and trachea but it is highly expressive in the tongue and rectum. It is found in the mitochondrial inner membrane. Mitochondrial calcium homeostasis plays key roles in cellular physiology and regulates cell bioenergetics, cytoplasmic calcium signals and activation of cell death pathways and is involved in buffering the amplitude of systolic calcium rises in cardiomyocytes.	100 ug	47437	5%	As Per Rule

8474	Biorbyt	orb317899	Rabbit polyclonal antibody to SLC22A4 also known as ET transporter whose expression can be detected in the lung and spinal cord but it is highly expressive in the trachea and fetal liver. It is found in the multi pass membrane. This protein is a low affinity sodium-ion dependent carnitine transporter. It probably transports one sodium ion with one molecule of carnitine, and also transports organic cations such as tetraethylammonium (TEA) without the involvement of sodium.	100 ug	47437	5%	As Per Rule

SI. No.	Principal Name	Cat. No.	Products Description	Pack Size	Rc Price	Discount (%)	GST
8579	Biorbyt	orb318719	Rabbit polyclonal antibody to sialoadhesin also known as SIGLEC1, whose expression can be detected in the liver Kupffer cells and lamina propria of colon and lung and colon, but is highly expressive in the spleen and perivascular macrophages in the brain. It is found in the cell membrane. This protein extensively acts as an endocytic receptor mediating clathrin dependent endocytosis and macrophage-restricted adhesion molecule that mediates sialic-acid dependent binding to lymphocytes, including granulocytes, monocytes, natural killer cells, B-cells and CD8 T-cells.	100 ug	45233	5%	As Per Rule

9068	Biorbyt	orb318917	Rabbit polyclonal antibody to JAK2 also known as JAK-2 whose expression can be detected in whole-body tissues ubiquitously. It is found in the extrinsic component of the nucleus. It can perform various functions like MAPK cascade mechanism and histone H3-Y41 phosphorylation. In the nucleus it plays a key role in chromatin by specifically mediating phosphorylation of 'Tyr-41' of histone H3 (H3Y41ph), a specific tag that promotes the exclusion of CBX5 (HP1 alpha) from chromatin. In the cytoplasm, it plays a pivotal role in signal transduction via its association with type I receptors such as growth hormone (GHR), prolactin (PRLR), leptin (LEPR), erythropoietin (EPOR), thrombopoietin (THPO); or type II receptors including IFN-alpha, IFN-beta, IFN-gamma and multiple interleukins.	30 ul (Trial size)	20440	5%	As Per Rule

9613	Biorbyt	orb319441	Rabbit polyclonal antibody to beta lactoglobulin also known as Bosd5 whose expression can be detected in the mammary gland but is highly expressive in the breasts. It is found in the extracellular matrix. This protein is extensively a primary component of whey that binds retinol and is probably involved in the transport of that molecule. It also helps in the long chain fatty acid and retinol binding.	100 ug	45233	5%	As Per Rule

9659	Biorbyt	orb322964	There are two types of cytokeratins/keratins/CKs: the acidic type I cytokeratins and the basic or neutral type II cytokeratins. The subsets of cytokeratins which an epithelial cell expresses depends mainly on the type of epithelium, the moment in the course of terminal differentiation and the stage of development. Thus this specific keratin fingerprint allows the classification of all epithelia upon their keratin expression profile. Furthermore this applies also to the malignant counterparts of the epithelia (carcinomas), as the keratin profile tends to remain constant when an epithelium undergoes malignant transformation. The main clinical implication is that the study of the keratin profile by immunohistochemistry techniques is a tool of immense value widely used for tumor diagnosis and characterization in surgical pathology. [Wiki]	20 ug	57905	5%	As Per Rule
9660	Biorbyt	orb322968	Caldesmon is an actin- and myosin-binding protein implicated in the regulation of actomyosin interactions in smooth muscle and nonmuscle cells (could act as a bridge between myosin and actin filaments). Stimulates actin binding of tropomyosin which increases the stabilization of actin filament structure. In muscle tissues, inhibits the actomyosin ATPase by binding to F-actin. This inhibition is attenuated by calcium-calmodulin and is potentiated by tropomyosin. Interacts with actin, myosin, two molecules of tropomyosin and with calmodulin. Also play an essential role during cellular mitosis and receptor capping. Involved in Schwann cell migration during peripheral nerve regeneration (By similarity). [UniProt]	20 ug	57905	5%	As Per Rule
9661	Biorbyt	orb322972	NKX2.2 acts as a transcriptional activator. Required for the maintenance of NEUROD1 expression in the hormone-producing endocrine cells of the pancreas. May be involved in specifying diencephalic neuromeric boundaries, and in controlling the expression of genes that play a role in axonal guidance. Associates with chromatin at the NEUROD1 promoter region. Binds to a subset of consensus elements within the NEUROD1 promoter (By similarity). [UniProt]	20 ug	57905	5%	As Per Rule

10355	Biorbyt	orb323288	Rabbit polyclonal to CD8, was first discovered as a cell surface marker in mice and was used to distinguish between CD8+ CTLs and CD4+ Th cells. CD8 exists as both a heterodimer (CD8 $\alpha\beta$) and a homodimer (CD8 $\alpha\alpha$) of which the former is expressed on the majority of CTLs. CD8 has been shown to be involved in CTL co-activation by increasing antigen sensitivity, and by stabilizing the TCR/pMHC interaction. In order to carry out these roles, the CD8 co-receptor binds to a distinct invariant region of the pMHC molecule, compared to the TCR, allowing the potential for tripartite (TCR/pMHC/CD8) complex formation. CD8 is most often described as a T-cell co-receptor because it plays an important role in T-cell signaling, via p56lck, to induce TCR mediated T-cell activation signals. Work in our lab and others has shown that the CD8 co-receptor is also important for CD8+ T-cell development, stabilization of the interface between CD8+ T-cells and target cells, and activation of intestinal epithelial T lymphocytes (iIELs).	100 ug	45233	5%	As Per Rule

10977	Biorbyt	orb335040	Rabbit polyclonal antibody to GNG10 which can be ubiquitously and abundantly detected everywhere in the body. It is found in the plasma membrane. It can be extensively involved in various biological processes like signal transduction and cellular response to glucagon stimulus. It can also activate G-protein coupled receptor signaling pathway. G proteins are involved as modulators or transducers in various transmembrane signaling systems. The beta and gamma chains are required for GTPase activity, for replacement of GDP by GTP, and for G protein-effector interaction.	50 ul	37887	5%	As Per Rule

12131	Biorbyt	orb335375	Rabbit polyclonal antibody to PLCE1 also known as PLC epsilon1 and Phospholipase C epsilon1, whose expression can be detected broadly everywhere except in peripheral blood leukocytes but is ubiquitously and abundantly expressive during heart failure. It is found in the cytosol. It can extensively be involved in various biological processes like phosphatidylinositol phospholipase C activity and signal transducer activity downstream of receptor. This protein can also act as an effector of heterotrimeric and small G-protein and it may play a role in cell survival, cell growth, actin organization and T-cell activation.	50 ul	37887	5%	As Per Rule

14753	Biorbyt	orb338978	Rabbit polyclonal antibody to CD32b also known as CDw32 and FcR1I-b whose expression can be detected in the macrophages and basophils but it is highly expressive in the placenta and Langerhans cells. It is found in the dendritic spine. It can perform various functions like negative regulation of acute inflammatory response to antigenic stimulus and signal transduction. It is involved in the variety of effector and regulatory functions such as phagocytosis of immune complexes and modulation of antibody production by B-cells.	30 ul (Trial size)	23745	5%	As Per Rule
14754	Biorbyt	orb338978	Rabbit polyclonal antibody to CD32b also known as CDw32 and FcR1I-b whose expression can be detected in the macrophages and basophils but it is highly expressive in the placenta and Langerhans cells. It is found in the dendritic spine. It can perform various functions like negative regulation of acute inflammatory response to antigenic stimulus and signal transduction. It is involved in the variety of effector and regulatory functions such as phagocytosis of immune complexes and modulation of antibody production by B-cells.	100 ul	40274	5%	As Per Rule

			This p-PERK Ab is generated from rabbits immunized with a synthetic peptide. It is polyclonal and unconjugated in nature. p-PERK a serine/threonine kinase of the GMGC group plays a critical role in the regulation of cell growth and differentiation. PERK1 (MAPK3) and PERK2 (MAPK1) play central roles in MAPK cascades and are activated by a wide variety of extracellular signals including growth and neurotrophic factors, cytokines, hormones and neurotransmitters. Depending on the cellular context, MAPK cascades mediate diverse biological functions such as cell growth, adhesion, survival and differentiation through the regulation of transcription, translation, cytoskeletal rearrangements.		45233	5%	As Per Rule

			Rabbit polyclonal antibody to RPL41 also known as HG12, whose expression can be detected in the tongue but is highly expressive in the tonsils and amniotic fluid. It is found in the cytosolic large ribosomal subunit. This protein interacts with the beta subunit of protein kinase CK2 and stimulates phosphorylation of DNA topoisomerase II alpha by CK2. It also helps in the mRNA 3' 5'-UTR binding and nuclear-transcribed mRNA catabolic process, nonsense-mediated decay.	100 ul	55518	5%	As Per Rule

16271	Biorbyt	orb251474	Rabbit polyclonal antibody to BMP2 also known as bone morphogenetic protein 2 and it belongs to TGF-beta family which is expressed in the prostate as well as the ovarian duct but is highly expressed in the spleen and colon. It is found in the BMP receptor complex. This protein can Induce cartilage and bone formation. It stimulates the differentiation of myoblasts into osteoblasts via the EIF2AK3-EIF2A- ATF4 pathway. BMP2 activation of EIF2AK3 stimulates phosphorylation of EIF2A which leads to increased expression of ATF4 which plays a central role in osteoblast differentiation. In addition, it also stimulates TMEM119, which upregulates the expression of ATF4.	100 ug	45233	5%	As Per Rule

16277	Biorbyt	orb251481	Rabbit polyclonal antibody to iNOS is found in a variety of cell types including macrophages, hepatocytes, synoviocytes, and smooth muscle cells. Cytokines such as interferon-gamma (IFN), tumor necrosis factor (TNF), interleukin-1 and -2, and lipopolysaccharides (LPS) cause an increase in iNOS mRNA, protein, and activity levels. Protein kinase C-stimulating agents exhibit the same effect on iNOS activity. After cytokine induction, iNOS exhibits a delayed activity response which is then followed by a significant increase in NO production over a long period of time.	100 ug	45233	5%	As Per Rule
16278	Biorbyt	orb251482	Rabbit polyclonal antibody to CD19 also known as B-lymphocyte antigen CD19, which is expressed in the tonsils as well as in the testis but is highly expressed in spleen and bone marrow cell. It is found in the cell membrane. CD19 can also help in the regulation of B cell receptor signaling pathway. This protein can assemble with the antigen receptor of B-lymphocytes in order to decrease the threshold for antigen receptor-dependent stimulation.	100 ug	45233	5%	As Per Rule

			Rabbit polyclonal antibody to IB1 also known as VLA4, which is expressed in the differentiated prostate gland cells as well as in the placenta but is highly expressed on the surface of erythroleukemia cells and hematopoietic cell lines. It is found in the recycling endosome. Integrin extensively regulates cell adhesion and laminin matrix deposition. It is also Involved in promoting endothelial cell motility and angiogenesis along with osteoblast compaction through the fibronectin fibrillogenesis cell-mediated matrix assembly process and the formation of mineralized bone nodules. This protein may also be involved in up-regulation of the activity of kinases such as PKC via binding to KRT1. Together with KRT1 and RACK1 it serves as a platform for SRC activation or inactivation. Plays a mechanistic adhesive role during telophase required for the successful completion of cytokinesis. They provide a docking site for FAP (seprase) at invadopodia plasma membranes in a collagen-dependent manner and hence may participate in the adhesion and formation of invadopodia and matrix degradation processes, promoting cell invasion.	100 ug	45233	5%	As Per Rule

21191	Biorbyt	orb256674	Rat polyclonal antibody to Tau having MW of 82 KD that helps stabilize microtubules in our body. On splicing MAPT one can obtain tau protein. Majority of them are found in the CNS region within the neurons but they are not abundant in astrocytes and oligodendrocytes. Tau proteins exist as six different isoforms in brain tissue. These can be distinguished from each other based on their binding domains. If tau protein is no longer functioning we may develop disorders that affect the nervous system such as Alzheimer's and Parkinson's disease. These proteins are very rarely found in non-neuronal cells and are mainly active in the axon part of the neuron.	30 ul (Trial size)	22827	5%	As Per Rule

21338	Biorbyt	orb256723	Rabbit polyclonal antibody to NOTCH1, which is also known as AOVD. NOTCH1 is frequently found in the intracellular domain of the nucleus and is expressed in the basal keratinocytes and mesencephalic ventricular zone of the neural tube. It is overexpressed in the cerebrospinal fluid. This protein extensively functions as a receptor for membrane-bound ligands Jagged1, Jagged2 and Delta1 to regulate cell-fate determination. Upon ligand activation through the released notch intracellular domain (NICD) it forms a transcriptional activator complex with RBPJ/RBPSUH and activates genes of the enhancer of split locus.	30 ul (Trial size)	20440	5%	As Per Rule

22433	Biorbyt	orb259644	Rabbit polyclonal antibody to osteocalcin is the most abundant non-collagenous protein in bone, comprising almost 2% of total protein in the human body. It is important in bone metabolism and is used as a clinical marker for bone turnover, but its precise function remains elusive. With no known enzyme activity, osteocalcin's function depends on its structure. That structure has now been determined by X-ray crystallography, to reveal a negatively charged protein surface that places five calcium ions in positions complementary to those in hydroxyapatite, an important mineral component of bone. Using this recognition mechanism, osteocalcin could potentially modulate the crystal morphology and growth of hydroxyapatite. And in this complex, the carboxy terminus of osteocalcin, which promotes the adhesion of osteoblasts and osteoclasts in bone replacement, is readily accessible.	100 ug	45233	5%	As Per Rule

23574	Biorbyt	orb304038	Rabbit polyclonal antibody to BCL2 also known as apoptosis regulator bcl2, which is expressed in the varieties of tissues but is highly expressed on the surface of ectocervix and coronary artery. It is found in the endoplasmic reticulum membrane. It suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoietic and neural cells also regulates cell death by controlling the mitochondrial membrane permeability. This protein appears to function in a feedback loop system with caspases and can inhibit caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding to the apoptosis-activating factor (APAF-1).	100 ug	45233	5%	As Per Rule

23832	Biorbyt	orb304590	Rabbit polyclonal antibody to SMIT1 also known as Na(+)/myo-inositol cotransporter and SLC5A3 whose expression can be detected in tumors but is highly expressive in the cerebral white matter of oligodendrocyte progenitor cells. It is found in the multi pass membrane. This protein is involved in the prevention of intracellular accumulation of high concentrations of myo-inositol (an osmolyte) that result in impairment of cellular function. It also helps in the regulation of respiratory gaseous exchange and peripheral nervous system development.	30 ul (Trial size)	20440	5%	As Per Rule

24697	Biorbyt	orb308737	Rabbit polyclonal antibody to IL1 alpha also known as hematopoietin1, which is expressed in the urinary bladder cell but is highly expressed in the bronchial epithelium cell and alveolar macrophage. It is found in the cytosol. This protein is produced by activated macrophages and stimulates thymocyte proliferation by inducing IL-2 release, B-cell maturation, proliferation and fibroblast growth factor activity. IL-1 proteins are involved in the inflammatory response being identified as endogenous pyrogens and are reported to stimulate the release of prostaglandin and collagenase from synovial cells.	100 ug	45233	5%	As Per Rule
24698	Biorbyt	orb308738	Rabbit polyclonal antibody to LIPG.	100 ug	45233	5%	As Per Rule

24701	Biorbyt	orb308741	Rabbit polyclonal antibody to ompF also known as porin ompF, levels of ompF protein decreases in an ion/ycgE double disruption. It is found in the outer membrane of the cell and ion channel complex. This protein forms pores that allow passive diffusion of small molecules across the outer membrane. It is also a receptor for the bacteriophage T2. It is also involved in the disordered domain specific binding and porin activity. Various other important aspects in which it is involved are drug transmembrane transport and protein homotrimerization.	100 ug	45233	5%	As Per Rule

27099	Biorbyt	orb1548	Rabbit polyclonal to 5 HT. Serotonin (pronounced) (5-hydroxytryptamine, or 5-HT) is a monoamine neurotransmitter synthesized in serotonergic neurons in the central nervous system (CNS) and enterochromaffin cells in the gastrointestinal tract of animals including humans. Serotonin is also found in many mushrooms and plants, including fruits and vegetables.	100 ug	60476	5%	As Per Rule

27124	Biorbyt	orb10033	Rabbit polyclonal antibody to beta actin, which is also known as PS1TP5BP1 and BRWS1. Actin is frequently found in the cytoplasmic mRNP granules containing untranslated mRNAs and is expressed in blood and the adrenal gland. It is overexpressed in the neutrophil and T lymphocytes. Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed in all eukaryotic cells and are a major constituent of microfilaments.	100 ug	45233	5%	As Per Rule

27238	Biorbyt	orb10151	Rabbit polyclonal antibody to ATF1. The protein belongs to the bZIP family. ATF subfamily, is localized in the nucleus. ATF1 is shown to play a key role in the induction of NOX1, mediates PKA-induced stimulation of CRE-reporter genes. Defects in ATF1 may be a cause of angiomatoid fibrous histiocytoma (AFH).	100 ug	47437	5%	As Per Rule

27249	Biorbyt	orb10162	The CD274 antibody is commonly known as PD-L1. B7-H1 is the target , it is a member of the B7 family, and belongs to the Ig superfamily. B7-H1 is expressed on a majority of leukocytes. CD274 is also Involved in the signaling , it also helps in the production of IL10 and IFNG, in an IL2-dependent and a PDCD1-independent manner. Interaction with PDCD1 inhibits T-cell proliferation and cytokine production.	100 ug	45233	5%	As Per Rule

27322	Biorbyt	orb10237	Rabbit polyclonal antibody to caspase 3 is also known as apopain and whose expression can be detected in the tonsils and skeletal muscles but it is highly expressive in the spleen and kidney. It is found in the death-inducing signaling complex in plasma membrane. This protein is extensively involved in the activation cascade of caspases responsible for apoptosis execution. At the onset of apoptosis, it proteolytically cleaves poly(ADP-ribose) polymerase (PARP) at a 216-Asp-I-Gly-217 bond. Caspase 3 cleaves and activates sterol regulatory element binding proteins (SREBPs) between the basic helix-loop-helix leucine zipper domain and the membrane attachment domain.	5 ug (Trial size)	12910	5%	As Per Rule

			CTSG (Cathepsin G) is a Protein Coding gene. Diseases associated with CTSG include Papillon-Lefevre Syndrome and Cutaneous Mastocytosis. Among its related pathways are Defensins and Degradation of the extracellular matrix. GO annotations related to this gene include serine-type endopeptidase activity and peptidase activity. An important paralog of this gene is GZMB. Serine protease with trypsin- and chymotrypsin-like specificity. Cleaves complement C3. Has antibacterial activity against the Gram-negative bacterium P.aeruginosa, antibacterial activity is inhibited by LPS from P.aeruginosa, Z-Gly-Leu-Phe-CH2Cl and phenylmethylsulfonyl fluoride.		45233	5%	As Per Rule

27391	Biorbyt	orb10307	CD20 antigen is a type of tumor marker. Also called CD20. There's a protein found on B cells (a type of white blood cell). It may be found in higher than normal amounts in patients with certain types of B-cell lymphomas and leukemias. Measuring the amount of CD20 antigen on blood cells may help to diagnose cancer or plan cancer treatment. The protein has no known natural ligand[8] and its function is to enable optimal B-cell immune response, specifically against T-independent antigens. It is suspected that it acts as a calcium channel in the cell membrane. It has been shown that CD20 also plays a role in the microenvironmental interactions of B cells.	100 ug	45233	5%	As Per Rule

			CLDN1 (Claudin 1) is a Protein Coding gene. Diseases associated with CLDN1 include Ichthyosis, Leukocyte Vacuoles, Alopecia, And Sclerosing Cholangitis and Sclerosing Cholangitis. Among its related pathways are Blood-Brain Barrier and Immune Cell Transmigration.GO annotations related to this gene include identical protein binding and structural molecule activity. An important paralog of this gene is CLDN7.Claudins function as major constituents of the tight junction complexes that regulate the permeability of epithelia. While some claudin family members play essential roles in the formation of impermeable barriers, others mediate the permeability to ions and small molecules.		45233	5%	As Per Rule

27637	Biorbyt	orb10573	Rabbit polyclonal antibody to SLC22A3 and is also known as protein E7 whose expression can be detected in the early protein. It is found in the host cytoplasm and host nucleus. This protein plays an effective role in viral genome replication by driving entry of quiescent cells into the cell cycle that stimulates progression from G1 to S phase allowing the virus to efficiently use the cellular DNA replicating machinery to achieve viral genome replication. It also plays an extensive role in the inhibition of both antiviral and antiproliferative functions of host interferon alpha.	5 ug (Trial size)	12910	5%	As Per Rule

This protein plays an effective role in viral genome replication by driving entry of quiescent cells into the cell cycle that stimulates progression from G1 to S phase allowing the virus to efficiently use the cellular DNA replicating machinery to achieve viral genome replication. It also plays an extensive role in the inhibition of both antiviral and antiproliferative functions of host interferon alpha.	100 ug	51294	5%	As Per Rule

27817	Biorbyt	orb10741	Gremlin-1 (Grem1), an antagonist of bone morphogenetic proteins, is involved in fibrotic tissue formation in kidney and lung. Like BMPs, BMP antagonists contain cystine knots and typically form homo- and heterodimers. The antagonistic effect of the secreted glycosylated protein encoded by this gene is likely due to its direct binding to BMP proteins. As an antagonist of BMP, this gene may play a role in regulating organogenesis, body patterning, and tissue differentiation. Antagonist of BMP2; inhibits BMP2-mediated differentiation of osteoblasts (in vitro) .Acts as inhibitor of monocyte chemotaxis. Can inhibit the growth or viability of normal cells but not transformed cells when is overexpressed.	100 ug	45233	5%	As Per Rule

28194	Biorbyt	orb11118	Rabbit polyclonal antibody to NFkB p65 also known as TF65 and RELA whose expression can be detected in the brain and choroid plexus but is highly expressive in the telencephalon and tonsils. It is found in the nucleus after LPS stimulation. NFkB-p65 is a subunit of NF-kappa-B transcription complex, which plays a crucial role in inflammatory and immune responses. The inhibitory effect of I-kappa-B upon NF-kappa-B in the cytoplasm is exerted primarily through the interaction with p65. P65 shows a weak DNA-binding site which could contribute directly to DNA binding in the NF-kappa-B complex.	5 ug (Trial size)	12910	5%	As Per Rule

28252	Biorbyt	orb11181	Rabbit polyclonal antibody to Occludin, which is also known as OCLN. It is frequently found in the plasma membrane and bicellular tight junctions. It is expressed in the tight junctions of the epithelial and endothelial cells and is overexpressed in the kidney. This protein plays an extensive role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier and can also induce adhesion when expressed in cells lacking tight junctions. Along with this, occludin helps in the regulation of bicellular tight junction assembly and protein complex assembly.	5 ug (Trial size)	12910	5%	As Per Rule

28301	Biorbyt	orb11225	Rabbit polyclonal antibody to PAF receptor which is also known as PAF-R and PAFr whose expression can be detected in the heart and lung but is highly expressive in the placenta and ventricles. It is found in the cell membrane. It can perform functions like cellular response to 2-O-acetyl-1-O-hexadecyl-sn-glycero-3-phosphocholine and phosphatidylinositol-mediated signaling. It seems to mediate its action via a G protein that activates a phosphatidylinositol-calcium second messenger system.	5 ug (Trial size)	12910	5%	As Per Rule
28302	Biorbyt	orb11225	Rabbit polyclonal antibody to PAF receptor which is also known as PAF-R and PAFr whose expression can be detected in the heart and lung but is highly expressive in the placenta and ventricles. 28562	Biorbyt	orb11495	TNF (Tumor Necrosis Factor) is a Protein Coding gene. Diseases associated with TNF include Migraine With Or Without Aura 1 and Asthma. GO annotations related to this gene include identical protein binding and cytokine activity. Cytokine that binds to TNFRSF1A/TNFR1 and TNFRSF1B/TNFR2. It is mainly secreted by macrophages and can induce cell death of certain tumor cell lines. It is potent pyrogen causing fever by direct action or by stimulation of interleukin-1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell proliferation and induce cell differentiation.	100 ug	45233	5%	As Per Rule

28627	Biorbyt	orb11557	In recent decades, a variety of signaling molecules, such as VEGF-VEGFRs, ephrin-Eph receptors, angiopoietin-Tie, and the Delta-Notch system, have been identified as playing important roles in angiogenesis. Among these, vascular endothelial growth factors (VEGFs) and receptors (VEGFRs) regulate both vasculogenesis, the development of blood vessels from precursor cells during early embryogenesis, and angiogenesis, the formation of blood vessels from pre-existing vessels at a later stage3. VEGFR-1 and VEGFR-2 play major roles in physiological as well as pathological angiogenesis, including tumor angiogenesis.VEGFR-2, the major signal transducer for angiogenesis, preferentially utilizes the PLC gamma-PKC-MAPK pathway for signaling.	100 ug	45233	5%	As Per Rule

28662	Biorbyt	orb15325	CD133, also called Prominin-1, is a product of a single-copy gene on chromosome 4 (4p15.33) in human or chromosome 5 (5b3) in mice. Human CD133 is a transmembrane glycoprotein of 865 amino acids with a total molecular weight of 120 kDa. This protein consists of an N-terminal extracellular domain, five transmembrane domains with two large extracellular loops, and a 59 amino acids cytoplasmic tail [4]. It is selectively localized in microvilli and other plasma membrane protrusions [5,6]. In general, CD133 positive and CD133 negative cells display different characters.	100 ug	54416	5%	As Per Rule

28676	Biorbyt	orb13226	Rabbit polyclonal antibody to Serotonin transporter which is also known as SLC6A4 and 5HTT whose expression can be detected in the blood but it is highly expressive in the platelets. It is found in the endosome membrane. It can perform functions like nitric-oxide synthase binding and negative regulation of cerebellar granule cell precursor proliferation. Serotonin transporter whose primary function in the central nervous system involves the regulation of serotonergic signaling via transport of serotonin molecules from the synaptic cleft back into the pre-synaptic terminal for re-utilization and plays a key role in mediating regulation of the availability of serotonin to other receptors of serotonergic systems. It terminates the action of serotonin and recycles it in a sodium-dependent manner.	100 ug	47437	5%	As Per Rule

28863	Biorbyt	orb13410	FPR1 (Formyl Peptide Receptor 1) is a Protein Coding gene. Diseases associated with FPR1 include Susceptibility To Localized Juvenile Periodontitis and Periodontitis 1, Juvenile. Among its related pathways are Peptide ligand-binding receptors and Innate Immune System. GO annotations related to this gene include G-protein coupled receptor activity and RAGE receptor binding. An important paralog of this gene is FPR2. FPR1 High affinity receptor for N-formyl-methionyl peptides (fMLP), which are powerful neutrophil chemotactic factors. Binding of fMLP to the receptor stimulates intracellular calcium mobilization and superoxide anion release. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system	100 ug	45233	5%	As Per Rule

28882	Biorbyt	orb13429	CD114 is also called as CSF3R (Colony Stimulating Factor 3 Receptor) it is a Protein Coding gene. Diseases associated with CSF3R include Neutrophilia, Hereditary and Neutropenia, Severe Congenital 7, Autosomal Recessive. Among its related pathways are Innate Immune System and Pathways in cancer. GO annotations related to this gene include receptor activity and cytokine receptor activity. An important paralog of this gene is IL6ST.Receptor for granulocyte colony-stimulating factor (CSF3), essential for granulocytic maturation. Plays a crucial role in the proliferation, differentiation and survival of cells along the neutrophilic lineage. In addition it may function in some adhesion or recognition events at the cell surface.	100 ug	47437	5%	As Per Rule

28956	Biorbyt	orb13507	This IL6 Ab is generated from rabbits immunized with a synthetic peptide derived from human IL-6 terminus. It is polyclonal and unconjugated in nature. This gene encodes a cytokine that functions in inflammation and the maturation of B cells. In addition, the encoded protein has been shown to be an endogenous pyrogen capable of inducing fever in people with autoimmune diseases or infections. The protein is primarily produced at sites of acute and chronic inflammation, where it is secreted into the serum and induces a transcriptional inflammatory response through interleukin 6 receptor, alpha. Cytokine with a wide variety of biological functions. It is a potent inducer of the acute phase response. Plays an essential role in the final differentiation of B-cells into Ig-secreting cells involved in lymphocyte and monocyte differentiation. Acts on B-cells, T-cells, hepatocytes, hematopoietic progenitor cells and cells of the CNS. Required for the generation of T(H)17 cells.	20 ug (Trial size)	20991	5%	As Per Rule

29043	Biorbyt	orb13589	Rabbit polyclonal antibody to MSH alpha also known as CLIP and ACTH whose expression can be detected in the testis but is highly expressive in pituitary glands. It is found in the peroxisomal matrix. MSH (Melanocyte stimulating hormone) alpha is an anorexigenic peptide and increases the pigmentation of skin by increasing melanin production in melanocytes. This protein is also involved in the antimicrobial humoral immune response mediated by antimicrobial peptide.	100 ug	47437	5%	As Per Rule

29070	Biorbyt	orb13614	iNOS is found in a variety of cell types including macrophages, hepatocytes, synoviocytes, and smooth muscle cells. Cytokines such as interferon-gamma (IFN), tumor necrosis factor (TNF), interleukin-1 and -2, and lipopolysaccharides (LPS) cause an increase in iNOS mRNA, protein, and activity levels. Protein kinase C-stimulating agents exhibit the same effect on iNOS activity. After cytokine induction, iNOS exhibits a delayed activity response which is then followed by a significant increase in NO production over a long period of time.	100 ug	45233	5%	As Per Rule

29100	Biorbyt	orb13647	PGC1 alpha also known as PPARGC1A (PPARG Coactivator 1 Alpha) it is a Protein Coding gene. Diseases associated with PPARGC1A include Obesity and Lipomatosis. Among its related pathways are Signaling mediated by p38-alpha and p38-beta and Circadian rythm related genes. GO annotations related to this gene include nucleic acid binding and RNA binding. An important paralog of this gene is PPRC1. Transcriptional coactivator for steroid receptors and nuclear receptors. Greatly increases the transcriptional activity of PPARG and thyroid hormone receptor on the uncoupling protein promoter. Can regulate key mitochondrial genes that contribute to the program of adaptive thermogenesis. Plays an essential role in metabolic reprogramming in response to dietary availability through coordination of the expression of a wide array of genes involved in glucose and fatty acid metabolism. Induces the expression of PERM1 in the skeletal muscle in an ESRRA-dependent manner. Also involved in the integration of the circadian rhythms and energy metabolism. Required for oscillatory expression of clock genes, such as ARNTL/BMAL1 and NR1D1, through the coactivation of RORA and RORC, and metabolic genes, such as PDK4 and PEPCK.	100 ug	45233	5%	As Per Rule

29218	Biorbyt	orb13881	Rabbit polyclonal antibody to CD163, also named M130, is a macrophage-associated antigen that is a member of the scavenger receptor cysteine-rich (SRCR) superfamily. It is highly expressed on macrophages and to a lesser extent on monocytes. CD163 functions as a high affinity scavenger receptor for the complex of haemoglobin and haptoglobin which forms to clear haemoglobin from the blood.	100 ug	54416	5%	As Per Rule

29951	Biorbyt	orb169590	Mouse Monoclonal antibody to AURKB. Aurora Kinase B (AURKB) belongs to a family of mitotic serine/threonine kinases. AURKB connects with chromosomes for the period of prophase prior to relocalizing to the spindle at anaphase. AURKB localizes to microtubules near kinetochores, specifically to the specialized microtubules called K-fibers. AURKB controls chromosome segregation through the control of microtubule-kinetochore attachment and cytokinesis. AURKB is required for kinetochore localization of BUB1 and SGOL1. AURKB expression during the G2/M phase transition is firmly coordinated with histone H3 phosphorylation, while overexpression is seen in many kinds of cancers. AURKB phosphorylates Ser-10 and Ser-28 of histone H3 during mitosis. AURKB is a component of the CPC (chromosomal passenger complex), which is a complex that acts as a key regulator of mitosis. High level expression of AURKB is seen in the thymus, which is also expressed in the spleen, lung, testis, colon, placenta and fetal liver. AURKB is expressed during S and G2/M phase and expression is up-regulated in cancer cells during M phase.	5 ug	27969	5%	As Per Rule

			Mouse Monoclonal antibody to EGFR. The epidermal growth factor receptor (EGF R) subfamily of receptor tyrosine kinases comprises four members: EGF R (also known as HER1, ErbB1 or ErbB), ErbB2 (Neu, HER-2), ErbB3 (HER-3), and ErbB4 (HER-4). All family members are type I transmembrane glycoprotein that has an extracellular domain which contains two cysteine-rich domains separated by a spacer region that is involved in ligand-binding, and a cytoplasmic domain which has a membrane-proximal tyrosine kinase domain and a C-terminal tail with multiple tyrosine autophosphorylation sites. The human EGF R gene encodes a 1210 amino acid (aa) residue precursor with a 24 aa putative signal peptide, a 621 aa extracellular domain, a 23 aa transmembrane domain, and a 542 aa cytoplasmic domain. EGF R has been shown to bind a subset of the EGF family ligands, including EGF, amphiregulin, TGF- β , betacellulin, epiregulin, heparin-binding EGF and neuregulin-2 in the absence of a co-receptor. Ligand binding induces EGF R homodimerization as well as heterodimerization with ErbB2, resulting in kinase activation, tyrosine phosphorylation and cell signaling. EGF R can also be recruited to form heterodimers with the ligand-activated ErbB3 or ErbB4. EGF R signaling has been shown to regulate multiple biological functions including cell proliferation, differentiation, motility and apoptosis. In addition, EGF R signaling has also been shown to play a role in carcinogenesis.		27969	5%	As Per Rule

			Mouse Monoclonal antibody to LDHA.LDHA catalyzes the conversion of L-lactate and NAD to pyruvate and NADH in the final step of anaerobic glycolysis. LDHA is localized primarily in muscle tissue and is part of the lactate dehydrogenase family. Mutations in LDHA have been linked to exertional myoglobinuria. LDH1 is decreased in essential thrombocythemia. LDHA is induced through a non-genomic pathway of estrogen action. Reduction in LDH-A activity results in stimulation of mitochondrial respiration and decrease of mitochondrial membrane potential.		27969	5%	As Per Rule

29973	Biorbyt	orb169874	Mouse Monoclonal antibody to MAPK1. Mitogen-activated protein kinase 1 (MAPK1) is also known as extracellular signal-regulated kinase 2 (ERK2). Two similar (85% sequence identity) protein kinases were originally called ERK1 and ERK2. They were found during a search for protein kinases that are rapidly phosphorylated after activation of cell surface tyrosine kinases such as the epidermal growth factor receptor. Phosphorylation of ERKs leads to the activation of their kinase activity. The molecular events linking cell surface receptors to activation of ERKs are complex. It was found that RasGTP-binding proteins are involved in the activation of ERKs. Another protein kinase, Raf-1, was shown to phosphorylate a MAPK kinase, thus qualifying as a MAPK kinase kinase. The MAPK kinase was named MAPK/ERK kinase (MEK). Receptor-linked tyrosine kinases, Ras, Raf, MEK and MAPK could be fitted into a signaling cascade linking an extracellular signal to MAPK activation. Transgenic gene knockout mice lacking MAPK1 have major defects in early development.	5 ug	27969	5%	As Per Rule

29983	Biorbyt	orb169688	Mouse Monoclonal antibody to CLEC4E.CLEC4E (MINCLE or CLECSF9), belongs to a diverse family of proteins which were originally defined by their ability to recognize a wide range of ligands of carbohydrate structure. MINCLE is expressed in macrophages subjected to several types of stress. CLEC4E has an important role in response to trehalose-6,6-dimycolate (TDM) and activated by a synthetic analogue, trehalose dibehenate (TDB). It was reported recently that MINCLE is connected with an immunoreceptor tyrosine-based activation motif-containing Fc receptor chain (FcR) and functions as an activating receptor for damaged self- and non-self-pathogenic fungi.	5 ug	27969	5%	As Per Rule
