New from MP Bio

Detect Mycoplasma in 20 Min!

Myco-Sniff-Rapid™ for fast and sensitive mycoplasma detection in cell culture

One major contamination issue in cell culture is mycoplasma infection. The presence of mycoplasma can alter many cellular processes and cause malfunctioning of cells in proliferation, protein synthesis, DNA transfection, etc. Therefore, a fast and simple mycoplasma detection method is necessary to ensure the reliability, reproducibility and consistency of your cell culture research. MP Bio is pleased to announce the launch of Myco-Sniff-Rapid Mycoplasma Luciferase Detection Kit with the following benefits:

- ✓ **Rapid results in 20 minutes**
- ✓ **Sensitive and specific for detecting all common mycoplasma species**
- ✓ **No interference with cell culture media components**
- ✓ **Simple operation: add reagents directly to the culture supernatant**

If quantification and species analysis of mycoplasma are required, we recommend Myco-Sniff-Valid Mycoplasma PCR Detection Kit, which can sensitively detect mycoplasma as low as 10 CFU/mL. Use our highly-cited Mycoplasma Removal Agent (MRA) to prevent mycoplasma contamination in cultures or to treat cultures that test positive for Mycoplasma.

Lymphocyte Separation Media

Blood is composed of several cell types that need to be routinely isolated, such as monocytes, lymphocytes, and polymorphonuclear leukocytes. Isolation of mononuclear and polymorphonuclear cells from blood serves as the starting point for a wide spectrum of immunology studies. One challenge for many researchers is how to specifically isolate mononuclear and polymorphonuclear cells from blood with high yield and cell viability. MP Biomedicals offers three products for the isolation of mononuclear and polymorphonuclear cells from human peripheral blood, bone marrow, and umbilical cord blood. Lymphocyte Separation Medium (LSM™), LymphoSep™, and Mono-Poly™ Resolving Medium have been used for these applications by researchers worldwide.

Mononuclear Cell Isolation for Research Use

Lymphocyte Separation Medium (LSM™) is a legendary tool to separate lymphocytes from human peripheral blood as well as bone marrow, and umbilical cord blood. As proven by more than 2,200 scientific publications, it ensures:

- Maximum yield of monocytes
- > 96% cell viability of lymphocytes
- Easy one-step centrifugation
- Low endotoxin levels
- Sterility

Mononuclear and Polymorphonuclear Isolation in One Step

When it is necessary to separate both mononuclear and polymorphonuclear cells from blood, Mono-Poly™ Resolving Medium (Mono-Poly™, M-PRM) may be used. Differential migration during centrifugation allows for the resolution of both mononuclear and polymorphonuclear leukocytes into two distinct bands that are relatively free of erythrocytes. This can be performed in a one-step centrifugation process.

ASPERGILLUS GM Lateral Flow Assay

AF2003/ 50 TESTS

Results in
45 Minutes

Highly Specific
& Sensitive

Test
More Often

High sensitivity (91%*) & specificity (87%*)

- Negative predictive value (NPP) of 99%
- Detects Additional epitope
- 6 Months shelf life
- Blend of 2 different antibodies
- Reduces hand-on time (45 min Vs Elisa 2 hrs.)
- LOD of 1ng/ml in BAL & serum

CrAg[®] LFA

CRYPTOCOCCAL ANTIGEN
LATERAL FLOW ASSAY

The IMMY CrAg[®] LFA (Cryptococcal Antigen Lateral Flow Assay) is the first and only immunochromatographic dipstick assay for the qualitative and semi-quantitative detection of cryptococcal antigen. This lateral flow assay is revolutionizing cryptococcal antigen testing, by delivering analytical sensitivity that is up to 200x more sensitive than other commercial assays. The CrAg[®] LFA is empowering health care providers in all clinical settings with rapid, reliable, and robust diagnostic results.

TEST FEATURES

No specimen pretreatment

- No boiling CSF
- No Pronase treatment required for serum

Qualitative & Semi-Quantitative Results

2-Year Shelf Life | Room Temperature Storage

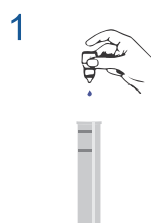

Most Sensitive Assay on the Market

10 Minute Test Time | 1 Minute Tech Time

Simple. Better.

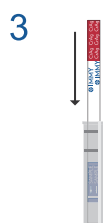

5-Easy Steps

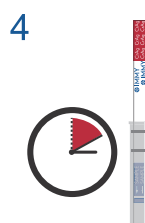

1
Add 1 drop of
specimen diluent

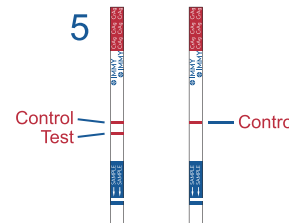

2
Add 40 µL
of specimen

3
Insert strip

4
Incubate
10 min

5
Control
Test
Control
1 line = negative
2 lines = positive

Superior Semi-quantitative (Titration) Results

The CrAg[®] LFA has been found to produce semi-quantitative results up to 5x more sensitive compared to other products on the market.

TITER TIME COMPARISON	
CrAg [®] LFA	Latex Agglutination
10 minutes	60 minutes

Substantial Workflow Benefits

- » Can be performed on all shifts
- » No need for controls with every batch
- » Low training threshold
- » Less than 1 minute hands-on tech time
- » Eliminate subjective interpretation of agglutination patterns

Bovine serum albumin (BSA)

Bovine serum albumin (BSA) is purified from serum using one of three different purification methods: cold-organic solvent fractionation, heat shock and ion exchange chromatography. Mannuzza and Montalto point out that each method produces a BSA that can meet standard specifications, but often ignored are the attributes not measured in a standard Certificate of Analysis. These unmeasured attributes, like fatty acid profiles, hormone profiles, contaminants and presence of IgG, transferrin and other peptides can be critical to a BSA's performance in a particular application.

MP Catalog No	Competitor Catalog No	Product Description
160069	919 A7906	Albumin Bovine, Fraction V >98%
194772	919 A2153	Albumin, bovine, fatty acid free, low endotoxin, cell culture reagent
881001	919 A5470	Albumin, Bovine, Crystalline >99%
882045	919 A9418	Albumin Bovine, Fraction V, Protease Free
199898	919 A2153	AlbumiNZ™ Bovine Albumin Essential Protease Free
199896	919 A1933	AlbumiNZ™ Bovine Albumin Low Endotoxin >97%
180620	919 A9418	AlbumiNZ™ Bovine Albumin Microbiological Grade ≥97%
199899	919 A7030	AlbumiNZ™ Bovine Albumin, Free Fatty Acid >97%
199897	919 A3059	AlbumiNZ™ Bovine Albumin, IgG free >97%

Heat shock fractionation

Originally developed to inactivate hepatitis virus, the process uses stabilizers and heat which although results in the recovery of high purity albumin with a high yield has certain disadvantages principle among them being:

- Other plasma proteins are neglected
- Stabilizers such as caprylic acid are used to make sure the albumin does not denature in the heat
- Plasma is heat treated at 68°C with 9% ethanol or some other solvent at a pH of 6.5
- Could result in the presence of new antigens due to possible heat denaturation of the albumin

Chromatographic extraction:

This process utilizes different properties of molecules (proteins) to achieve separation viz:

- ionic strength
- affinity to other molecules
- size

This process does not use precipitation or denaturing steps to preferentially separate different fractions resulting in more intact molecules and more native protein.

Advantages of MP Bio's manufacturing process:

There are multiple advantages in the use of a chromatographic fractionation process for purification of Albumins. The process does not involve the use of heat, ethanol or caprylate and neither precipitation or denaturing steps are involved in the preferential separation of different fractions. The conditions are milder compared to the other processes and this leads to multiple advantages such as:

1. Chromatographic extraction is reported to give a high monomer content (typically >97%). MP Bio BSA is expected to have lesser aggregates of higher composition. The monomer and dimer content averages 89% and 10% resp. We haven't yet tested the monomer and dimer content in BSA from competition that manufacture BSA using other processes, although we expect the monomer content to be lower in those BSA samples
2. Since no solvent, heat or stabilizers are used, the proteins are intact, and a much cleaner product is obtained bereft of any neo-antigens
3. Lesser inhibitors introduced into cell culture systems, leading to enhanced cell nutrition and greater cell number yield. (please refer to Research data later in this section on CHO and SP2/O cells)
4. Proven improved cell growth and cell viability, and much higher productivity in bio-chemical reactions. (please refer to customer testimonials later in this section for comparative data with BSA manufactured using a non-chromatographically extracted process)

A table of other comparative advantages of the chromatographic extraction process is shown below:

Parameter	Heat Shock	Cohn	Chromatography
Functionality	Low	Medium	High
Monomer content	Low	Medium	High
Price	Low	Medium	Medium - High (quantity dependent)
Batch Size	Large	Medium	Small - Large (flexible)

MP Biomedicals manufactures five standard grades: **Low Fatty Acid, Low Endotoxin, Low Protease, Low IGG & Microbiological Grade.**

DNA: Soil/ Feces/Environmental

SPINeasy™ DNA Kit for Soil

Cat# 116530050/ 50 preps

COLUMN Type (New Upgrade)

DNA: Human & Animal Feces

SPINeasy™ DNA Kit for Feces

Cat# 116531050/ 50 preps

- Includes optimized lysing beads tube (Lysing Matrix E)
- High Performance SPIN COLUMN -> Fast & Convenient
- Specialized buffer for inhibitor removal

Free
Sample Kit
Available

Product Highlights

- Lysing Matrix E tube with three kinds of glass beads can effectively lyse cell bodies to release DNA, ensuring non-biased study of the microbiome.
- Proprietary lysis buffers to protect released DNA and remove unwanted RNA.
- Specially formulated buffers to get rid of humic substances and other inhibitors, greatly improve the purity of extracted gDNA.
- Column S1 with high binding capacity and selectivity for gDNA. It is designed with large volume to reduce frequency of liquid transfer.

Specialized Buffer System:

Efficient Removal of Inhibitors

High Performance Spin Column:

High Binding capacity

Optimized Beads Tube:

'Unique' mixture of 3 different Beads

Spin-Column Extraction Kit for Soil gDNA

1 Quality and Quantity of Extracted gDNA

Table 1: Quality and quantity of gDNA extracted from various soil samples using SPINeasys DNA Kit for Soil.

Sample Type	Yield(ng/mg sample)	260/280	260/230
Organic soil	47.78±0.21	1.79±0.01	1.10±0.02
Paddy soil	16.03±0.06	1.94±0.01	1.70±0.04
Flowerbed soil	14.88±0.65	1.84±0.01	1.20±0.04
Saline soil	7.55±0.65	1.89±0.01	1.40±0.00
Desert soil	1.64±0.19	1.85±0.06	1.02±0.00

SPINeasys DNA Kit for Soil is compatible with various soil types. Extracted gDNA is of high yield and purity.

2 Electrophoretic Analysis

Figure 1: gDNA extracted from different soil samples using SPINeasys DNA Kit for Soil

M: 1kb plus DNA ladder
 Lane 1: Organic soil
 Lane 2: Paddy soil
 Lane 3: Flowerbed soil
 Lane 4: Saline soil
 Lane 5: Desert soil

Extracted gDNA is highly intact.

3 16S rDNA PCR amplification

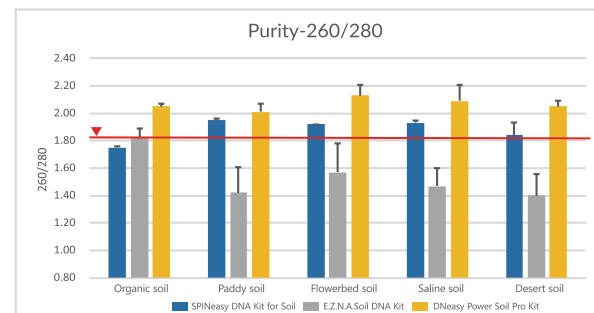

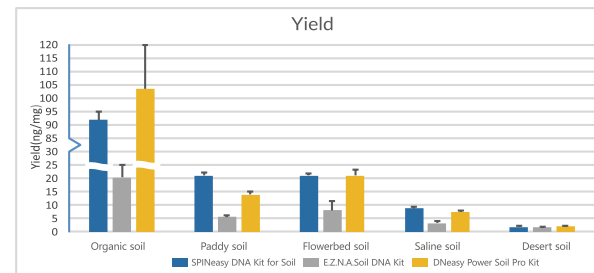

Figure 2: PCR amplification of 16S rDNA gene from different soil samples using SPINeasys DNA Kit for Soil

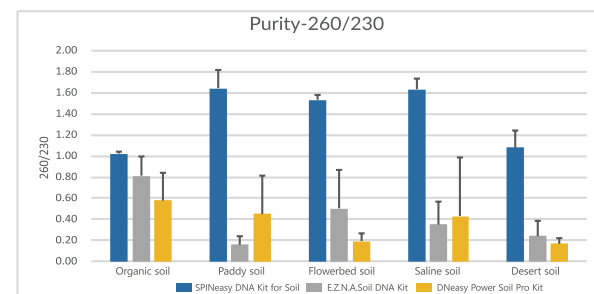

M: 1kb plus DNA ladder
 Lane 1: Organic soil
 Lane 2: Paddy soil
 Lane 3: Flowerbed soil
 Lane 4: Saline soil
 Lane 5: Desert soil
 Lane 6: Negative control

Extracted gDNA is free from inhibitors and ready for downstream analysis.

4 Performance Comparison

Remark 1: Pure DNA has 260/280 at 1.80 (Indicated with red line).

Remark 2: Pure DNA has 260/230 > 1.00.

SPINeasys DNA Kit for Soil has consistently achieved better yield and purity as compared to competitor kits.

MP Biomedicals

Life Science Products & Services

SPECIALTIES

BIOCHEMICALS

Amino Acids, Antibiotics, Carbohydrates, Detergents, Enzyme Inhibitors, Lipids, Nucleosides, Nucleotides & Peptides, Proteins & Derivatives, Stains & Dyes, Ultra Pure Buffer Reagents

CHEMICALS

Inorganics, Organics, Acids & Bases, Solvents, Adsorbents

ANIMAL DIETS & FEED

Standard Animal Diets, Standard Mineral and Vitamin Mixtures, Diet Components

ANTIBODIES

Primary Antibodies, Secondary Antibodies, Antisera, Specialty Reagents, Blocking Agents

CELL BIOLOGY

Cell Analysis, Cell Separation Media, Culture Media, Cell Culture Supplements, Serum and Serum Replacement, Cell Culture Antibiotics, Contamination Management, Mammalian Cell Culture, Microbiology Cell Culture, Plant Tissue Culture Media

SAMPLE PREPARATION

FastPrep Bead Beating Systems, Lysing Matrices, DNA & RNA Isolation and Purification, Protein Extraction and Purification, Automated Nucleic Acid Purification, Sample Holders

ELECTROPHORESIS

Acrylamide, Agarose, Cross-linking Reagents, Electrophoresis Buffers, Gel Stains, Agarose Gel Apparatus & Accessories

LAB EQUIPMENT, REAGENTS & FOOD QUALITY TESTING

Liquid Handling, SafTest™ Lipid Quality Testing, Microplate Systems, Centrifugation, Scintillation Cocktails, Labware Cleaning Products

IMMUNOASSAYS

RIA, EIA, ChLIA Kits for Research, Stress, Reproduction, Neuroscience, Endocrinology

MOLECULAR BIOLOGY

Cloning & Transformation, PCR & qPCR, Blotting & Hybridization
