S.S. OIL BATH

Bath Material - S.S 316, Single walled without insulation, Heater material used in bath - SS 316, Bakelite Handles are provided to bath. Separate temperature control unit with $\pm 1^\circ$ Accuracy controls temperature from ambient to 250°C by Solid-state time proportional controller com Digital display using a PT-100 sensor. A unit can be kept 2 mtrs away from the oil bath.

Oil bath can be used for heating round bottom glass flasks.

323 AUTOMATIC WATER DISTILLATION UNIT (GLASS)

All Glass Single & Double Distillation Unit, with Quartz Heater tube vertical & horizontal type. Distillation apparatus units are made from low expansion borosilicate glass tubing. The most sensitive part of unit is heater which is made from fused quartz glass tubes. Housing properties of very high temperature resistance. Borosilicate glass is neutral in its nature produces high purity of distilled water from these units.

Description of Apparatus: These units consist of main boiler. A built in heater enclosed in quartz glass tube. Housing auto water level adjuster, bottom outlet for cleaning waste discharge which is fitted with Teflon screw cap valve. A coil condenser fitted on top for condensing vapours. The whole unit is mounted on epoxy coated metal box stand and covered with acrylic sheets.

Power supply unit is inbuilt no extra attachment is required. Housing steady and reliable power system require 1 k.w. power per heater. These distillation units are more compact, require less space, reliable, easy to operate on continue basis.

Direction for using:

- First connect the side arm connector/silicon tube for distilled water.
- Divide the given silicon tube x two parts according to your requirement i.e.inlet & outlet pipes then start water supply to inlet.
- Switch on power.
- Unit will start automatically when the water level is complete on the boiler.
- There should not be any disturbance/obstacle in outlet pipe so that the water should go smoothly e.g. outlet pipe should not be crushed and should not go above the outlet level

Direction for Washing:

- Boiling cylinder must be in cool condition or lukewarm.
 - Stop the water supply
 - Open the drain valve of the boiling cylinder
 - There should be approx... Half of the water retained in the boiling cylinder.
 - Put the washing liquid (Old hydrochloric acid) into washing cup. Add some clean water into it and then start water supply.
 - Open the drain valve after cleaning the dust. Drain the water one or two times after completing the water level
- Precaution: Do not switch on the power while cleaning the boiling cylinder.

MAIN FEATURE:

- Unbelievable short worm of time of 9 to 10 minutes.
- Remarkably low cooling water consumption.
- It should be also easily cleanable.
- Distilled water in cold condition
- Automatic start, cutoff and re-start in synchrony with water pressure of opening by electronic circuit
- Powder coated compact stand with option for wall mounting housing all the parts with protective see through cover having indicator of mains AC on & Automatic On/Off switch for heater.
- Ready to operate with only power water connection & drain facilities from the customer side.

Sterilization

- Autoclaving (121°C, 15 psig for 20 Minutes) Clean and Rinse item with distilled water before autoclaving. Certain chemicals which have on appreciable effect on resins at room temperature may cause deterioration at autoclaving temperatures.
- ALWAYS COMPLETELY DISENGAGE THREADS BEFORE AUTOCLAVING.
- Gas - Ethylene oxide formaldehyde.
- Dry Heat - 160°C for 120 Minutes
- Disinfectant - Benzalkonium chloride, formalin, ethanol, etc.
- Radiation - Gamma irradiated At 2.5 Mard with unstabilized plastic.
Sterilizing reduces mechanical strength. Do not use PC vessels for vacuum application if they have been autoclaved
