30 YEARS AND GLO-ING

Celebrating 30 Years of Innovation and
Discovery using Bioluminescent Technology

Bringing Luciferase from Nature to the Benchtop

The glowing tail of a firefly or the blue waves of the ocean are a first exposure to the wonder of bioluminescence in nature. This phenomenon was recognized as a powerful platform to develop biological assays by researchers in the early years of biochemistry and molecular biology. In 1991 Promega released our first luciferase assay products, starting a program of further innovations that now includes a wide assortment of different assays built through continued research and innovation of bioluminescent systems. Here we detail the progression of research methods through the years and the amazing scientific advances made by innovative scientists and the power of bioluminescence.

“

Bioluminescence as a natural phenomenon is widely experienced with amazement and delight at the prospect of living organisms creating their own light.

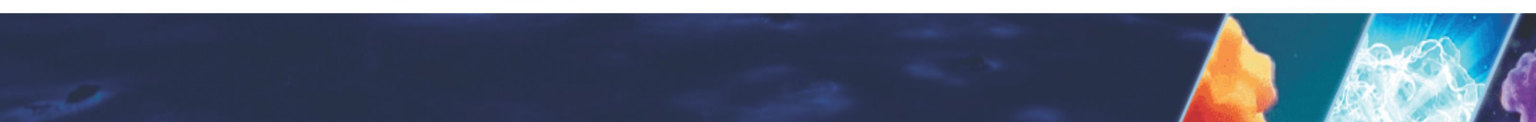

Keith V. Wood, 1998.

There is nothing routine about
Next-Generation Sequencing.

Every step counts.

Two Sensitive Reporters. One Extraordinary Assay.

Nano-Glo[®] Dual-Luciferase[®] Reporter Assay

A new reporter partnership with the *Sensitivity*, *Flexibility* and *Control* you need to detect small changes in expression and measure them with confidence. Improved firefly chemistry and the small, sensitive NanoLuc[®] luciferase make this the most powerful dual-reporter assay available.

- Greater sensitivity at low expression levels.
- Your choice of two primary reporters.
- Better control, more reliable data.
- Less interference with natural biology.
- Improved reagent stability simplifies storage options.
